RE: *Cultural Resources Review*
Northern San Benito County Groundwater Management Plan
Program Environmental Impact Report (EIR), California

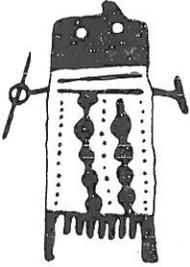

Dear Ms. Monette,

Please let this letter report stand as Basin Research Associates' cultural resources review for the above project. This review was requested in order to fulfill the various mandates of the California Environmental Quality Act (CEQA) and cultural resources and planning directives of the counties of San Benito and Santa Clara County. The review provides the results of an archaeological records search of the Plan area, a review of pertinent literature, prehistoric and historic contexts, and presents recommendations for future program environmental compliance documents.

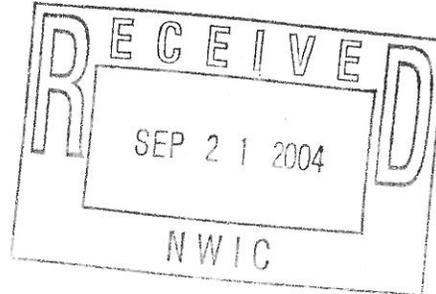

PROJECT LOCATION AND DESCRIPTION

The San Benito County Water District (SBCWD) will prepare an Environmental Impact Report (EIR) on the implementation of a Northern San Benito County Groundwater Management Plan (SBCGMP, Plan) within its service area (including a small portion of Santa Clara County). The proposed project consists of the adoption and implementation of a groundwater management plan with goals and objectives for short-term and long-term management of water resources¹ in order to provide good quality water and adequate water supplies for existing and future agricultural, municipal, and industrial uses.

1. Surface and groundwater management as well as wastewater treatment discharges and use of reclaimed water supplies.

RE: Additional/Supplemental Areas Archival Records Search Results for
Cultural Resources Assessment (letter dated January 25, 2003)
Northern San Benito County Groundwater Management Plan
Program Environmental Impact Report (EIR), California

Dear Ms. Monette,

This letter report provides the results of the additional records search requested for the above project and it should be considered an addendum to our previously submitted report of January 25, 2003 (revised June 9, 2003). The search was undertaken due to changes in the location of previously planned facilities and the addition of minor expansion areas. No archaeological sites have been recorded in or adjacent to the additional areas. Each of the new search areas is reviewed individually below with references consulted.

RESEARCH SOURCES CONSULTED

A supplemental prehistoric and historic site record and literature search of the Groundwater Management Plan area and immediately adjacent areas was completed by the California Historical Resources Information System, Northwest Information Center at California State University Sonoma, Rohnert Park (CHRIS/NWIC File No. 02-843 [dated May 19, 2003]).

PROJECT SEARCH LOCATIONS AND RESULTS

RELOCATED LOCAL CONVEYANCE PIPELINE [see Fig. 4M in main report]

T 14S, R 6E, Unsectioned

No recorded sites in, adjacent or within 0.25 mile. No compliance reports on file with the CHRIS/NWIC in or adjacent.

Phase I Environmental Site Assessment Hollister Family Apartments APN 052-090-043 1480 San Juan Road Hollister, California

1. SUMMARY

RNC Environmental, LLC (RNC) has been retained by Pacific West Communities, Inc. to conduct a Phase I Environmental Site Assessment for the property identified as Assessor's Parcel Number 052-090-043, located at 1480 San Juan Road in the City of Hollister, San Benito County, California. This site is also referred to as the "Hollister Family Apartments."

This report is intended to constitute an "inquiry by an environmental professional" for All Appropriate Inquiry under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). As such, it presents the results of an effort to gather reasonably obtainable and practicably reviewable information regarding environmental conditions on the property. Sources of this information include interviews with present and (as necessary) past owners and operators of the property; a review of historical sources such as aerial photographs, maps, and building records; a search for environmental cleanup liens on the property; a review of government records of hazardous material storage facilities, known or threatened releases, waste generation, cleanup sites, etc., for the subject and surrounding properties; a visual inspection of the subject and adjacent properties, and a review of various information provided by the client. The methods and procedures utilized to gather and interpret this information are consistent with the nationally recognized standard, ASTM E1527-05.

The details of the information reviewed, and of any data gaps identified, can be found in the body of this document. The primary investigator for the assessment was Neil O'Hara, California Registered Environmental Assessor #REA1-05321.

This assessment has found that the subject property is currently vacant, except for an occupied rental residence and a shed. Prior to approximately 1980, the property was agricultural, planted with orchards. The house and barn on the property date from some time before 1939. Extensive trash and debris was noted on the property, particularly near the shed. Based on aerial photos, this appears to be a relatively recent development,

and not a long-term condition of the property. Stained soil and oily odors were noted in this area.

Although stains and odors, along with substantial trash, were observed in the area on the north side of the shed, this appears to be a *de minimis* condition. The debris has been present only for the last few years - parked vehicles are visible in this area in the 2007 and 2009 aerial photos, but no older ones. Soil samples were collected by scraping off only the top inch or less of visibly stained soil, and collecting immediately below that. The detection of only minor amounts of motor oil in this soil, and no other hydrocarbons, indicates that the observed stains are surficial only. No significant soil remediation or removal will be required in this area beyond removing visibly stained surface soils.

The non-detection of organochlorine pesticides in the remaining soil samples, and the presence of arsenic at normal background concentrations indicate that the past development of the property as an orchard has not resulted in the presence of residual persistent pesticides.

Adjacent properties include two gas stations, as well as residential and vacant properties. The gas stations are currently within regulatory compliance and there is no evidence that either represents a concern for the subject property. One of the gas stations, is a former leaking UST site. The Victory Gas site is located on the south side of San Juan Road, across from the western end of the subject property. A leak was discovered when the tanks were removed from this site in 1999; groundwater monitoring and remediation were implemented, and the site was closed in 2004. The groundwater monitoring program included four wells on the north side of San Juan Road, two of which were located on the subject property. No chemicals of concern were detected in either of the wells on the subject property.

Two former cleanup sites and two waste handlers were identified within one-half mile of the property. There is no evidence that either represents a concern for the subject property.

This assessment has revealed no evidence of recognized environmental conditions on the property.

2. INTRODUCTION

2.1 Purpose

Due to concerns regarding potential liability for toxic hazards, real estate investors need to assess property before purchase to determine if current or past occupants or surrounding land uses could adversely impact property development.

The Federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (42 USC §9601), which defines far-reaching joint, several, and retrospective

liability for environmental cleanup costs, also includes landowner liability protections for innocent landowners, bona fide prospective purchasers, and contiguous property owners, provided that certain conditions are met. One of these conditions is that “all appropriate inquiries” (AAI) must be made into present and past environmental conditions at the site. Performance of a Phase I Environmental Site Assessment according to ASTM Standard E1527 has been the industry standard method for such inquiries since 1993. In November 2005, the US Environmental Protection Agency (US EPA) released the first official Federal Rule for conducting “all appropriate inquiries”(40 CFR Part 312). Pursuant to §312.11 of the AAI rule, this assessment has been conducted in accordance with ASTM Standard, E1527-05, as a method of compliance with that rule.

According to the AAI rule, “All Appropriate Inquiries are intended to result in the identification of conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property.” Such conditions are defined as “recognized environmental conditions” by ASTM E1527-05, §1.1.1 as follows:

The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products on the property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures, onto the property, or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

Additional “business environmental risks” have also been evaluated in this report. These are potential concerns which are not directly related to CERCLA liability, but may result in other environmental liabilities or remediation costs. Many lenders and investors require that such risks be evaluated as a part of a Phase I report. These include:

- Asbestos-containing materials
- Lead-based paint
- Radon

2.2 Scope of Work

The standards and practices implemented in this assessment are intended to result in the identification of conditions indicative of releases and threatened releases of hazardous substances on, at, in, or to the subject property. The investigation seeks to identify the following types of information about the subject property:

- Current and past property uses and occupancies;
- Current and past uses of hazardous substances;
- Waste management and disposal activities that could have caused releases or threatened releases of hazardous substances;
- Current and past corrective actions and response activities undertaken to address past and on-going releases of hazardous substances, including engineering controls and institutional controls; and
- Properties adjoining or located nearby the subject property that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the subject property.

Specific investigative procedures implemented include:

- Interviewing the current owner and occupant of the subject property. For properties with multiple occupants, the inquiry includes interviewing major occupants, as well as those occupants likely to use, store, treat, handle, or dispose of hazardous substances, or those who have likely done so in the past.
- To the extent necessary to achieve the objectives above, interviewing current and past facility managers, past owners, occupants, or operators of the subject property; employees of current and past occupants of the subject property; and/or one or more owners or occupants of neighboring or nearby properties.
- Reviewing historical documents and records which may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records. Historical documents and records reviewed attempt to cover a period of time as far back in the history of the subject property as it can be shown that the property contained structures or from the time the property was first used for residential, agricultural, commercial, industrial, or governmental purposes.
- Reviewing Federal, tribal, State, and local government records or databases of government records, including:
 - reported releases or threatened releases, public health records, Emergency Response Notification System records, and records of land use restrictions for the subject property;

- registered waste management activities, including records of RCRA small quantity and large quantity generators, and records of registered storage tanks, for the subject and adjoining properties;
 - landfills and solid waste management facilities, voluntary cleanup and brownfields sites, leaking underground storage tanks, registries of engineering controls and/or institutional controls, delisted NPL sites; and current and former CERCLIS sites, for the subject and properties within one-half mile;
 - NPL and state-equivalent sites; RCRA facilities subject to corrective action , for the subject and properties within one mile.
- Conducting a visual on-site inspection of the subject property and facilities and improvements on the subject property, including a visual inspection of the areas where hazardous substances may be or may have been used, stored, treated, handled, or disposed.
 - Conducting a visual inspection of adjoining properties, from the subject property, public rights-of-way, or other vantage point (e.g., aerial photography), including a visual inspection of areas where hazardous substances may be or may have been stored, treated, handled or disposed.
 - Making recommendations for a Phase II Investigation if necessary.

In performing each of the standards and practices set forth in ASTM Standard E1527-05 and the AAI rules (40 CFR 312.20), RNC Environmental seeks to:

- Gather the information that is publicly available, obtainable from its source within reasonable time and cost constraints, and which can practicably be reviewed;
- Review and evaluate the thoroughness and reliability of the information gathered from various sources; and
- To the extent that there are data gaps in the information developed, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps with regard to the ability to identify conditions on the property.

This Phase I Environmental Site Assessment Report discusses all work performed by RNC to date with regard to this project. The principal findings are outlined throughout the body of this text and are summarized in the conclusion of this report.

2.3 Significant Assumptions

No significant assumptions were made in the course of this assessment.

2.4 Limitations and Exceptions

This report was compiled as a Phase I Environmental Site Assessment for the subject project. This report contains information and data provided to RNC by several sources. RNC in no way warrants the accuracy or completeness of the information provided to this investigation by those sources.

It should be noted that when an assessment is completed without adequate subsurface exploration or chemical screening of soil and groundwater beneath the site, as in this study, no statement of scientific certainty can be made regarding latent subsurface conditions which may be the result of on-site or off-site sources. The findings and conclusions of this report are not scientific certainties, but rather probabilities based on professional judgement concerning the significance of the data gathered during the course of this investigation. RNC is not able to represent that the site or adjoining land contains no hazardous waste, oil, underground storage tanks, or other latent condition beyond that detected or observed by RNC during the Phase I Environmental Site Assessment. The possibility always exists for contaminants to migrate through surface water, air, or groundwater. An investigation to determine whether or not contaminants are present in the surface and subsurface soil is not within the scope of work required to produce the Phase I Environmental Site Assessment. Chemical analysis of soil and groundwater samples to quantify levels of contamination is also not within the scope of work required to develop a Phase I Environmental Site Assessment.

For this assessment, no additional project-specific limitations arose.

2.5 Special Terms and Conditions

This report was prepared according to ASTM Standard E1527-05; no special terms or conditions were specified by the user. Should there be a need to conduct an investigation into a specific question not addressed in this report, contact our office immediately regarding your concerns.

2.6 User Reliance

This report was prepared for the exclusive use of Pacific West Communities, Inc., and its successor and/or assigns. It also may be relied upon by lenders, investors, government agencies (including, but not limited to, the California Department of Housing and Community Development, the USDA Rural Development Program, and the California Tax Credit Allocation Committee) and/or nonprofit entities which may provide financial assistance to, or partner with, Pacific West Communities, Inc., in the proposed development of the subject property.

No other person or entity is entitled to rely upon this report without the specific written authorization of RNC. Such reliance is subject to the same limitations, terms, and

conditions as the original contract with the client. RNC specifically disclaims any responsibility for any unauthorized use of this report.

All users of this report, whether identified in this section, provided authorization in a separate reliance letter, or for any reason using this report without specific authorization, should be aware that Landowner Liability Protection under CERCLA is also contingent upon the user's compliance with certain additional responsibilities, as specified in ASTM E1527-05, §6, and discussed in Section 5 of this report. RNC cannot be responsible for any user's failure to comply with these responsibilities.

2.7 Validity of Report

This report may be presumed to be valid for one year from its cover date, excepting that if acquisition of the property occurs more than 180 days after the date of this report (December 5, 2010), certain information in the report must be updated in accordance with ASTM E1527-05, §4.6.

3. SITE DESCRIPTION

3.1 Location and Legal Description

The subject property consists of the east half of an eight-acre parcel on the north side of San Juan Road, west of Miller Street in the City of Hollister, San Benito County, California. The street address is 1480 San Juan Road. The property is located in an unsectioned area of Township 12 South, Range 4 East, Mount Diablo Meridian.

According to the preliminary title report, the legal description of the property is:

Parcel, in the City of Hollister, County of San Benito, State of California, according to the Map filed November 16, 1984 in Book 6, Page 61 of Parcel Maps, in the Office of the County Recorder of said County.

APN: 052-090-043

Location maps and site maps of the subject property are attached to this report as Appendix A. Photographs of the subject property are attached to this report as Appendix B.

3.2 Site and Vicinity General Characteristics

The property is located near the western edge of the City of Hollister. San Juan Road is the former route of Highway 156, until a bypass was opened in 1997. It remains a mix of highway commercial, semi-rural and residential properties. The adjacent land to the north is a single-family residential neighborhood.

3.3 Current Use of the Property

The property is mostly vacant. A rental house and a shed is located near the southwest corner.

3.4 Descriptions of Structures, Roads, Other Improvements on the Site

A small house and a shed appear to be the remains of an old farmstead on the property. A paved driveway access to the adjacent mini-mart encroaches onto the east end of the property.

3.5 Current Uses of the Adjoining Properties

The adjacent properties to the north are residential. A mini-mart and gas station occupies the corner of San Juan Road and Miller Street; the subject property abuts the north and west sides of this parcel. Across Miller Street is a restaurant. Across San Juan Road to the south is a vacant former agricultural property, and a gas station. The property to the west is the continuation of the parcel of which the subject property is a part; it is vacant.

4. PHYSICAL SETTING

4.1 Topography

According to the most recent USGS topographic map covering the subject property and vicinity, the subject property is located on level terrain, at an elevation of approximately 274 feet above mean sea level.

Regional surface water drainage is generally toward the west, toward the San Benito River, about a half mile away.

4.2 Geology

The subject property is located in the Hollister Valley, within the Coast Ranges Geomorphic Province. The Coast Ranges are northwest-trending mountain ranges (2,000 to 4,000, occasionally 6,000 feet elevation above sea level), and valleys. The ranges and valleys trend northwest, subparallel to the San Andreas Fault. Strata dip beneath alluvium of the Great Valley. To the west is the Pacific Ocean. The Coast Ranges are composed of thick Mesozoic and Cenozoic sedimentary strata. The northern and southern ranges are separated by a depression containing the San Francisco Bay.

According to the Geologic Map of California, the subject property is located over Quaternary alluvium.

4.3 Soils

According to the Natural Resources Conservation Service, Web Soil Survey, the property is underlain by Sorrento silt loam and Sorrento silty clay loam. The parent material consists of alluvium derived from calcareous shale or sandstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 3c. Irrigated land capability classification is 1 This soil does not meet hydric criteria.

4.4 Groundwater

Two groundwater monitoring wells were located on the subject property, in association with a leaking underground storage tank site located across San Juan Road. (More information below.) Monitoring reports obtained through the State Water Resources Control Board show groundwater in these wells at a depth of 37 feet below ground surface. The groundwater gradient is toward the east and northeast.

5. USER PROVIDED INFORMATION

A User Questionnaire was completed by Mike Kelley on behalf of Pacific West Communities, Inc..

5.1 Title Records

A copy of a Preliminary Title Report regarding the subject property, prepared by Chicago Title Company and dated May 26, 2010, was provided. The report includes no references indicative of environmental concerns associated with the property.

The title report includes reference to an easement for a pipeline granted to Serafino Mello on November 14, 1949. A review of the easement agreement shows that the pipeline was intended to convey irrigation water; it is therefor not an environmental concern.

5.2 Environmental Liens or Activity and Use Limitations

No other knowledge of environmental liens was identified by the user.

5.3 Specialized Knowledge

The user reported no specialized knowledge of the property.

5.4 Commonly Known or Reasonably Ascertainable Information

The user reported no commonly known or reasonably ascertainable information of environmental significance with regard to the property.

5.5 Valuation Reduction for Environmental Issues

The user reported that the purchase price of the property is consistent with current market value.

5.6 Owner, Property Manager, and Occupant Information

According to the Preliminary Title Report, the property is owned by "J. B. Howard Family, LLC, a California Limited Liability Company as to an undivided 1/2 interest and Craig M. Ritts and Theresa Ritts, Trustees of the Ritts Family Trust utta dated March 31, 2006, as to an undivided 1/2 interest."

5.7 Reason for Performing Phase I

This report was commissioned for the purpose of qualifying the user and potential investors for "innocent landowner defense" under CERCLA.

5.8 Other

No additional information or previous environmental reports were provided.

6. ENVIRONMENTAL LIENS

6.1 Preliminary Title Report

As noted above, a Preliminary Title Report regarding the subject property, prepared by Chicago Title Company and dated May 26, 2010, was reviewed. The report indicates that there are no environmentally-related liens, encumbrances or activity use limitations recorded against the deed on the subject property.

6.2 State Records

The State of California, Department of Toxic Substances Control DTSC maintains three sources of information regarding properties with deed restrictions:

- The EnviroStor database includes sites cleaned up under DTSC oversight, and specifies whether a deed restriction was place on a property
- The DTSC Hazardous Waste Management Program (HWMP) has also developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office.

- The DTSC list of Border Zone sites includes facilities where nearby properties, not directly effected by a lien, may still have some activity use limitations.

The subject property is not listed in any of these sources as having a deed restriction, and there are no Border Zone sites within one-half mile of the property.

6.3 Federal Records

The US Environmental Protection Agency maintains three databases which may include information about liens and land use restrictions, if they have been established on a listed property:

- Comprehensive Environmental Response Compensation and Liability Information System List (CERCLIS)
- RCRAInfo, Corrective Action sites
- Brownfields Management System Database

The subject property does not appear on any of these lists.

7. RECORDS REVIEW

On May 26, 2010, RNC utilized the services of Environmental First Search to review data files obtained from various local, state and federal regulatory agencies, to determine whether there are publicly available records regarding hazardous materials for the subject and surrounding properties.

RNC also conducted direct supplemental searches of data posted on the internet by various agencies, in order to minimize potential errors resulting from the unavoidable limitations in the accuracy of computer mapping programs. The Environmental First Search report, as well as any significant findings from internet sources, are provided in Appendix E of this report.

7.1 Hazardous Waste Cleanup Sites

The following sources were reviewed for records of existing hazardous waste cleanup sites within one-half to one mile of the subject property:

- Comprehensive Environmental Response Compensation and Liability Information System List (CERCLIS); Source: US EPA. The CERCLIS database contains information on potentially hazardous waste sites that have been reported to the US EPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

- National Priority List (NPL); Source: US EPA. The NPL database, maintained by the US EPA, is a subset of CERCLIS and identifies sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas.
- RCRA Corrective Action Activity (CORRACTS); Source: US EPA. CORRACTS data was accessed using EPA's Enforcement & Compliance History Online The Corrective Action Program encompasses active, or soon to be active facilities, where hazardous waste pollutants have been released into soil, ground water, surface water, or air. RCRA Corrective Action differs from Superfund in that Corrective Action sites generally have viable operators and on-going operations.
- State Hazardous Waste Cleanup Sites (EnviroStor); Source: California Department of Toxic Substances Control (DTSC). The EnviroStor database provides access to detailed information on hazardous waste permitted and corrective action facilities, as well as existing site cleanup information. EnviroStor allows you to search for information on investigation, cleanup, permitting, and/or corrective actions that are planned, being conducted or have been completed under DTSC's oversight.
- Spills, Leaks Investigations and Cleanups (SLIC); Source: California State Water Resources Control Board (SWRCB). In the SLIC Program, Water Board staff oversee soil and water investigations, corrective actions, and human health risk assessments at sites with current or historic unauthorized discharges, which have adversely affected or threaten to adversely affect waters of the state. The program covers all types of pollutants (such as solvents, petroleum fuels, heavy metals, pesticides, etc.) and all environments (including surface water, groundwater, sediment, and soil).

No active cleanup sites were identified within the specified search distances.

7.2 Leaking Underground Fuel Tanks

The following source was reviewed for records of leaking underground fuel tank sites within one-half mile of the subject property:

- Leaking Underground Fuel Tanks (LUFT); Source: SWRCB.

One leaking UST sites were identified:

Victory Gas And Food	1615 San Juan Rd	Completed - Case Closed
----------------------	------------------	-------------------------

The Victory Gas site is located on the south side of San Juan Road, across from the western end of the subject property. Monitoring records for this site were obtained from the SWRCB's Geotracker system. A leak was discovered when the tanks were removed from this site in 1999; groundwater monitoring and remediation were implemented, and the site was closed in 2004. The groundwater monitoring program included four wells on the north side of San Juan Road, two of which were located on the subject property. No chemicals of concern were detected in either of the wells on the subject property.

There is no evidence to indicate that there is any residual contamination at this site which might impact the subject property.

7.3 Accidental Spills and Releases

The following source was reviewed for records of accidental spills and releases of hazardous material on the subject property:

- Emergency Response Notification System (ERNS); Source: U.S. Coast Guard, National Response Center.

No accidental spills or releases were identified on the subject property.

7.4 Previously Regulated Sites

The following sources were reviewed for information about facilities which were formerly identified or regulated by a government agency due to environmental concerns at the property. In each case, these sources were reviewed in conjunction with the active cleanup site sources discussed above.

- Delisted NPL Sites; Source: US EPA. Sites previously identified for priority cleanup under the Superfund Program which have since been removed from that list.
- CERCLIS "No Further Remedial Action Planned" (NFRAP); Source: US EPA. The CERCLIS-NFRAP database contains information on sites designated "No Further Remedial Action Planned" which have been removed from the CERCLIS database. NFRAP sites may be sites where no contamination was found following an initial investigation, where remedial action has been completed, or where US EPA has deferred to a state or local agency to oversee remediation.
- Brownfields Management System; Source: US EPA. The Brownfields Management System (BMS) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding.
- CalSites - No Further Action; Source: California Department of Toxic Substances Control (DTSC). This category contains properties at which DTSC has made a clear determination that the property does not pose a problem to the environment or to public health. This determination is typically based on findings of a Preliminary Endangerment Assessment.
- CalSites – Referrals; Source: DTSC. Site Mitigation and Brownfields Reuse Program Facility Sites referred to other agencies. This data was reviewed primarily to cross-check other sources, to reduce potential data gaps.

Two former cleanup and/or remediation sites were identified within one-half mile of the subject property.

Pacsci Quantic LLC 2751 San Juan Rd
Workingmans Auto Wrecking 2450 San Juan Road

Pacsci Quantic was evaluated in 1995 as a potential RCRA Corrective Action site. It was instead referred to the RWQCB for remediation oversight. Work was completed in 2009. The site is almost one-half mile southwest of the subject property; there is no evidence that it has had any potential impact to the subject property.

Workingmans Auto Wrecking was identified as a potential state cleanup site by DTSC in 1989. The site was referred to the San Benito County Environmental Health Department, which was last reported in 1996 to be working with the owners to obtain compliance. The site is about a third of a mile southwest of the subject property; there is no evidence that it has had any potential impact to the subject property.

7.5 Waste Management Activities on the Subject and Adjacent Properties

The following sources were reviewed for information about facilities which are identified or regulated by a government agency as handling or storing hazardous materials or petroleum products:

- Resource Conservation and Recovery Information System - Hazardous Waste Generators (RCRIS); Source: US EPA. RCRIS contains basic information on facilities which generate hazardous waste as defined by Resource Conservation and Recovery Act (RCRA). A LARGE QUANTITY GENERATOR (LQG) is a facility that generates more than 1000 kg. per month of non-acutely hazardous waste, or more than 1 kg. per month of acutely hazardous waste. A SMALL QUANTITY GENERATOR (SQG) generates between 100 kg. and 1000 kg. per month of non-acutely hazardous waste.
- Registered Underground Storage Tanks (UST); Source: SWRCB. The UST database contains statewide address, business name, and local agency information related to permitted Underground Storage Tank (UST) facilities.

Two adjacent business are listed as small-quantity hazardous waste generators:

Quik Stop Markets Inc Mkt 129	1300 San Juan Rd
Fast Gas	1615 San Juan

These listings are the adjacent gas stations at the southeast corner and across the road from the subject property. No violations are listed for either of these sites; field observations noted no evidence of poor housekeeping or other conditions of concern.

Three UST facilities were identified

Fast Gas 1617 San Juan Rd
Victory Gas 1615 San Juan Rd
Quik Stop 1300 San Juan Rd

Fast Gas and Quik Stop are the two adjacent gas stations; Victory Gas is a business previously operated in the present Fast Gas site. No current leaks or violations are reported at either site. A previous leak was reported at Victory Gas - see Section 7.2 above.

7.6 Waste Management Activities in Surrounding Area

The following sources were reviewed for information about facilities within one-half mile of the subject property which are identified or regulated by a government agency as transporting, disposing, or otherwise releasing hazardous materials:

- Resource Conservation and Recovery Information System - Treatment, Storage and Disposal Facilities (RCRIS-TSD); Source: US EPA. The RCRIS-TSD database contains basic information on facilities that Transport, Store, or Dispose of (TSD) hazardous waste as defined by RCRA.
- Solid Waste Information System (SWIS); Source: California Integrated Waste Management Board (CIWMB). The SWIS database contains an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites.
- Toxic Release Inventory System (TRIS); Source: US EPA. TRIS contains information on facilities which release toxic chemicals into the air, water, and land in reportable quantities under the Superfund Amendments and Reauthorization Act (SARA) Title III Section 313.

Two solid waste facilities were identified:

PMS Towing Service	1550 South Street
Industrial Waste Treatment Facility	South St

PMS towing is a former waste tire facility located 0.3 mile southeast of the subject property. No violations were reported.

The Industrial Waste Treatment Facility is located 1500 feet south of the subject property. It accepts biosolid sludge for land disposal, and does not represent a potential concern for the subject property.

7.7 Oil and Gas Wells

Oil and gas well map W3-8, dated March 23, 2009, published by the California Division of Oil, Gas, and Geothermal Resources, was reviewed. This map shows that the subject property is located on the south edge of the Hollister Oil Field. The oil field extends primarily to the northwest of the City; no wells are mapped on or adjacent to the subject property.

7.8 Cortese List

The California Environmental Protection Agency is responsible for compiling a list of known contaminated sites, generally referred to as the "Cortese List." The list is used for planning, rather than regulatory purposes, and is compiled from the following sources:

Contaminated or potentially contaminated hazardous waste sites listed in the CAL Sites database by DTSC;

Leaking Underground Storage Tanks with known groundwater contamination, listed by the California State Water Resources Control Board;

Landfills which have evidence of groundwater contamination or known migration of hazardous materials, listed by the California Integrated Waste Management Board.

Each of these sources is separately referenced in this report. The subject property is not reported on the Cortese List.

7.9 Tribal Records

The following source was reviewed for information regarding the location of tribal lands in the vicinity of the subject property, and the presence of US EPA regulated properties on those lands.

- Tribal Windows to the Environment. Source: US EPA. The American Indian Environmental Office (AIEO) coordinates and integrates all the tribal programs at the Environmental Protection Agency. To track the progress that these programs are making toward protecting the environment and public health in Indian country, AIEO has linked the various regulatory and environmental monitoring databases of EPA into a single "window to the environment" for tribes.

No tribal lands were identified within one mile of the subject property.

8. LOCAL AGENCY INQUIRIES

8.1 San Benito County Environmental Health Department

The San Benito County Environmental Health Department is the Certified Unified Program Agency ("CUPA") responsible for all oversight of hazardous materials storage, releases or spills, underground storage tanks, above ground storage tanks, and leaking underground storage tanks in all of San Benito County.

The Department was contacted by fax on June 3, 2010. No response has been received.

9. HISTORICAL USE INFORMATION

9.1 Recorded Land Title Records

A chain of title report was not provided by the client for RNC's use in preparing this report.

9.2 Aerial Photographs

Aerial photographs of the subject property, dated 1939, 1949, 1958, and 1989, were obtained from the University of California, Santa Barbara, library. Additional aerial photographs, published by the U. S. Geological Survey and dated 1998, 2003, 2007 and 2009, were obtained from Google Earth.

In the 1939 photo, San Juan Road exists in its present alignment along the south side of the property. The subject property and all adjacent properties are occupied by orchards. The house and shed on the property are visible.

No significant land use changes are apparent in the 1949 or 1958 photos, except that another house is present just to the west of the subject property.

The 1989 photo shows the subject property having been cleared, the north adjacent property developed as a subdivision, the mini-mart present at the southeast corner, and the gas station across the road. Further detail is difficult to discern due to poor photo resolution.

The 1998 through 2009 photos all show the subject and adjacent properties essentially in their present configuration. Only the 2007 and 2009 photos show various numbers of vehicles parked on the west and north sides of the shed.

Copies of the aerial photos are found in Appendix C of this report.

9.3 USGS Topographic Maps

U. S. Geologic Survey topographic map of the Hollister, California, 7.5' quadrangle, published in 1995, was reviewed. According to the map notes, it is based on photography dated 1955, with revisions dated 1987; a 1995 photo-inspection found no major culture revisions.

The map shows the house and shed on the property present in 1955; the adjacent subdivisions, mini-mart and gas stations are shown as added on the 1987 edition.

The map is included in Appendix A of this report.

9.4 Sanborn Insurance Company Maps

The Sanborn Map Company produced a series of large-scale maps, dating from 1867 to the present and depicting the commercial, industrial, and residential sections of some twelve thousand cities and towns in North America. The maps show significant detail regarding dwellings, commercial buildings, and factories. Where available, Sanborn maps are a valuable source of information about past land uses.

No Sanborn maps were identified which cover the subject property, as it was not urbanized at the time the maps were produced.

9.5 Property Tax Files

San Benito County Tax Assessor records list an assessed value of the larger 8-acre parcel as \$500,000, with a structure valued at \$40,000. No other substantive information is provided.

9.6 Zoning/Land Use Records

According to the City of Hollister, the property is within the West Gateway mixed use zoning area.

10. INTERVIEWS

An environmental questionnaire was completed by John Howard. Mr. Howard states that the property has been vacant except for a single-family rental home since about 1980. Prior to 1980 it was agricultural.

Mr. Howard is unaware of the presence of any hazardous materials on the property, and is unaware of any lawsuits, liens or regulator actions against the property, either past, present, or pending.

He is aware of the leaking UST at the gas station across the road; it is his understanding that this has been fully remediated. Two additional residences were present on the property in 1980; both of these structures burned - one accidentally, one intentional. [Note - RNC's interpretation is that these structures were located on the remainder parcel to the west, and not on the subject property.] Mr. Howard also provided documentation of the destruction of the monitoring wells and an old agricultural supply well on the property.

11. SITE VISIT/ASSESSMENT

A visual and physical reconnaissance of the subject property was conducted on June 2, 2010 by Neil O'Hara. A site map and photographs of the subject property are attached to

this report in Appendices A and B. A site visit/assessment checklist is attached to this report as Appendix C.

11.1 Survey Methodology

The reconnaissance was conducted by walking around the entire perimeter of the property, and crossing the property as needed to assure that the entire site was observed. The subject property was observed to be vacant, except for a house and a shed at the southwest corner.

11.2 Interior Observations

The shed was observed to be used for storage of a variety of household goods, and well as paints, cleaning supplies, etc. The interior of the house was inaccessible; the appearance of the yard was consistent with that of an occupied single-family residence. Electric utilities were observed.

11.3 Hazardous Substances Associated with Identified Uses

Two abandoned, partially disassembled vehicles were observed on the north side of the shed. Both were lying on their sides, and appeared to have leaked automotive fluids onto the soil. A significant amount of additional trash and debris was observed in this area, including retail-sized oil containers associated with apparent spills.

11.4 Storage Tanks

No evidence of storage tanks was observed.

11.5 Drums and Other Containers

A large number of empty one- to five-gallon plastic buckets were observed. The labels indicated that most had originally contained food-grade materials, a few contained biodegradable cleaners and adhesives.

11.6 Pits, Ponds, Lagoons

No pits, ponds, or lagoons were observed on the property.

11.7 Monitoring wells

No monitoring wells were observed. As noted above, the monitoring wells associated with the gas station across the street have been destroyed.

11.8 Soil Stains, Odors, Stressed Vegetation

An oily odors was present in the vicinity of the vehicles; some oil stains on the soil and in a concrete driveway were visible.

11.9 Fill soil and debris

No evidence of fill soil was observed. In addition to the debris noted near the shed, several other debris piles were observed throughout the property.

11.10 PCBs

The term polychlorinated biphenyls (PCBs) refers to any of several compounds that are produced by replacing hydrogen atoms in biphenyl with chlorine. PCBs are used in various industrial applications, primarily as an insulating fluid in electrical equipment. PCBs are considered hazardous materials due to their toxicity and their tendency to accumulate in animal tissues. The Toxic Substance Control Act of 1976 banned the manufacture, processing, distribution, and use of PCBs. However, continued use of existing PCB-containing and PCB-contaminated equipment, such electrical transformers, capacitors, and electromagnets is allowed for the life of that equipment. Federal regulations (40 CFR 761.2) require that electrical equipment of unknown PCB content be presumed to be PCB-contaminated if it was manufactured prior to July 2, 1979.

Several pole-mounted transformers were observed on power lines running along San Juan Road. All appeared to be in good condition.

11.11 Potable Water Supply

Public water service is provided to the property. A private well most likely served the property when the house was originally constructed.

11.12 Sewage Disposal System

Public sewer service is provided to the property. A private septic system most likely served the property when the house was originally constructed.

11.13 Adjacent Properties

Adjacent properties include a single family neighborhood to the north. Two adjacent properties are gas stations - one at the southeast corner and one across San Juan Road. No evidence of poor housekeeping or improper hazardous waste disposal was observed.

12. PHASE II ASSESSMENT

Based on the preliminary information obtained for this Assessment, it was determined that Phase II testing would also be required. The Phase II was therefore conducted concurrently, with soil samples collected at the time of the site visit, and submitted for laboratory analysis. The complete Phase II report is attached to this report as Appendix G.

Three issues of potential concern were addressed in the Phase II Assessment:

- The potential presence of residual pesticides, especially arsenic and chlorinated hydrocarbons, as a result of past agricultural practices on the property.
- The observed presence of spilled automotive fluids on the site.
- The potential presence of Polynuclear Aromatic Hydrocarbons (PAHs) as a combustion by-product from the burning of two houses which were formerly present on the remainder parcel immediately adjacent to the subject property.

A total of six soil samples were submitted to the laboratory.

Two were collected from the area north of the shed where junk and soil stains were observed. These samples are also close to the former location of the burned buildings. These samples were tested for petroleum hydrocarbons, gasoline-associated volatile compounds ("BTEX") and PAHs. The laboratory results found no gasoline, diesel, BTEX, or PAHs, and a low concentration of motor oil, below any regulatory action level.

The remaining four samples were collected from locations distributed across the undeveloped portion of the property. These samples were tested for arsenic and organochlorine pesticides. No pesticides were detected, and arsenic concentrations were consistent with naturally occurring background levels.

13. OTHER PUBLIC INFORMATION

An internet search identified no significant new information other than that discussed elsewhere in this report.

14. BUSINESS ENVIRONMENTAL RISKS

Additional "business environmental risks" have also been evaluated in this report. These are potential concerns which are not directly related to CERCLA liability, but may result in other environmental liabilities or remediation costs. Many lenders and investors require that such risks be evaluated as part of a Phase I report.

14.1 Asbestos Containing Materials

Asbestos includes any of several minerals which occur naturally in metamorphic rock formations in the earth's crust and that readily separate into long flexible fibers. Asbestos is resistant to destruction by heat or chemicals, and its fibers are extremely durable. These characteristics led to its use in wall insulation, paint, sprayed- or troweled-on surfacing materials, ceiling and flooring materials, pipe, boiler, and duct insulations, cement filler, and a variety of other products. Asbestos that may be crumbled by hand pressure is called "friable" asbestos. Material containing friable asbestos is considered hazardous because the fibers are easily released into the air by impact and deterioration. The inhalation of these fibers has been linked to the lung disease asbestosis, as well as lung cancer, mesothelioma, and other cancers. ("A Consumer Guide to Asbestos," Second Edition, California Contractors State License Board, September 1991).

The U.S. Environmental Protection Agency banned nearly all uses of asbestos in 1977/78 for ceilings, walls, insulation, patching and taping compound, and pipe and boiler insulation. However, the potential exists for asbestos to be present in older friable and non-friable materials.

Asbestos is not considered a hazardous waste under CERCLA when it is contained within building materials in an occupied building, but can become a hazardous waste if not properly handled during building demolition.

No obvious asbestos containing materials were observed. Based on the age of the buildings, there is a potential for asbestos-containing materials to be present. Prior to demolition of the existing structures, a comprehensive asbestos survey should be conducted, and any identified asbestos should be properly abated by a licensed asbestos abatement contractor. Typically, this work will be required as a condition for a demolition permit for the buildings.

14.2 Lead-based Paint

Buildings constructed prior to 1978 may have been painted with lead-based paint. When ingested or inhaled, lead constitutes a serious health hazard, especially for young children. Any renovation or demolition project which may result in disturbing lead-based paint must be completed according to federal regulations which control the release of lead dust. Paint which will not be disturbed, but which is peeling or flaking, is also a significant hazard and should be abated utilizing proper techniques.

Based on the age of the buildings, there is a potential for lead-based paint to be present. Lead-based paint is not considered a hazardous waste under CERCLA when it is associated with building materials in an occupied building, but can become a hazardous waste if not properly handled during building demolition.

Normally, lead paint testing is not required for building demolition. Intact paint can be disposed of as part of normal construction/demolition debris. Should flaking or loose paint be apparent, it should be tested for lead content and handled as a separate waste stream in a manner appropriate to the identified lead concentration.

14.3 Radon

Radon is a colorless, odorless, and tasteless gas that is produced by the decay of uranium and radium. This naturally occurring, radioactive gas is produced in most soil or rock. As a result, all buildings have some radon, as does the outdoor air. Radon can move easily through any material that has pores or void spaces through which gases can move. Void spaces and pores are found in the soil beneath any building. Radon is a known human carcinogen. The Surgeon General has warned that radon is the second leading cause of lung cancer in the United States. Anyone living in a building with elevated radon concentrations may have an increased risk of contracting lung cancer over a period of years.

The National Radon Database has been developed by the U.S. Environmental Protection Agency and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. Where necessary, data has been supplemented by information collected from private sources such as universities and research institutions.

The US EPA has designated San Benito County as Radon Zone 2, where average radon level in the area is between 2.0 and 4.0 pCi/L (pico curies per liter of air) for the first floor living area.

Recommended action by the USEPA is as follows:

- Under 2 pCi/L reducing radon levels below 2 pCi/L is difficult
- 2 pCi/ - 4 pCi/L consider reducing levels to below 2 pCi/L, however no action needs to be taken
- 4 pCi/L - 20 pCi/L take action to reduce radon levels to below 4 pCi/L
- Over 20 pCi/L take action to reduce concentrations to as far below 20 pCi/L as possible
- Over 200 pCi/L take immediate action to reduce concentrations as far below 200 pCi/L as possible.

This is only a general estimation of the radon levels for the area in which the subject property is located. Site specific radon testing is necessary if specific conditions on the subject property need to be determined.

15. FINDINGS

This assessment has found that:

- The subject property is currently vacant, except for an occupied rental residence and a shed.
- Prior to approximately 1980, the property was agricultural, planted with orchards. The house and barn on the property date from some time before 1939.
- Extensive trash and debris was noted on the property, particularly near the shed. Based on aerial photos, this appears to be a relatively recent development, and not a long-term condition of the property. Stained soil and oily odors were noted in this area.
- Adjacent properties include two gas stations, as well as residential and vacant properties. The gas stations are currently within regulatory compliance and there is no evidence that either represents a concern for the subject property.
- One of the gas stations, is a former leaking UST site. The Victory Gas site is located on the south side of San Juan Road, across from the western end of the subject property. A leak was discovered when the tanks were removed from this site in 1999; groundwater monitoring and remediation were implemented, and the site was closed in 2004. The groundwater monitoring program included four wells on the north side of San Juan Road, two of which were located on the subject property. No chemicals of concern were detected in either of the wells on the subject property.
- Two former cleanup sites and two waste handlers were identified within one-half mile of the property. There is no evidence that either represents a concern for the subject property.

16. DATA GAPS

None of the limitations of this assessment has result in a data gap of any significance.

17. OPINIONS

Although stains and odors, along with substantial trash, were observed in the area on the north side of the shed, this appears to be a *de minimis* condition. The debris has been present only for the last few years - parked vehicles are visible in this area in the 2007 and 2009 aerial photos, but no older ones. Soil samples were collected by scraping off only the top inch or less of visibly stained soil, and collecting immediately below that. The detection of only minor amounts of motor oil in this soil, and no other hydrocarbons, indicates that the observed stains are surficial only. No significant soil remediation or removal will be required in this area beyond removing visibly stained surface soils.

The non-detection of organochlorine pesticides in the remaining soil samples, and the presence of arsenic a normal background concentrations indicate that the past development of the property as an orchard has not resulted in the presence of residual persistent pesticides.

18. CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-05, of 1480 San Juan Road (APN 052-090-043), located in the city of Hollister, San Benito County, California, "*the property*". Any exceptions to, or deletions from, this practice are described in the Limitations Section of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property.

19. RECOMMENDATIONS

No further investigation is recommended.

We recommend that any soils in the vicinity of the shed which have visible oil stains and/or odors be excavated and removed from the site at the beginning of site preparation for construction.

20. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

“We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in the §312.10 of 40 CFR part 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR part 312.”

RNC Environmental, LLC

Neil O'Hara
REA #1-05321

21. STATEMENT OF QUALIFICATIONS

RNC Environmental, LLC was founded in 2004 by a small group of environmental professionals with decades of experience each. Structured around a minimum-overhead business model, RNC strives to provide top-quality consulting services in a cost-effective manner.

The principal of RNC Environmental is Neil O'Hara, whose 35+ years of experience include work in CEQA compliance, biological resources, wetlands evaluation and permitting, water quality management, habitat restoration, environmental site assessment, environmental education, and more.

In addition to the wide-ranging experience Neil brings to the table, RNC has an extensive network of multi-disciplinary resources, and is able to pull together a team to tackle virtually any environmental problem or project.

Neil E. O'Hara, REA

California Registered Environmental Assessor #1-05321

Mr. O'Hara's career in the environmental sciences includes 20+ years as a consultant and 15 years as an educator. His areas of expertise include environmental site assessment and due diligence, biological resources evaluation and wetlands assessment, CEQA compliance and regulatory compliance. He has conducted environmental assessments, trained and supported others in conducting such work, and provided third-party review services for a real estate investment fund. He has conducted over 100 Phase I Environmental Site Assessments, and provided third-party reviews for hundreds more. His work in interpreting regulations and specifications has been critical to the development of Phase I report formats which fully comply with ASTM E1527-05, the more stringent requirements for Fannie Mae and other major lenders, California Education Code requirements for school site evaluation, and EPA's new All Appropriate Inquiry rules.

He has managed the preparation of CEQA documents, including Mitigated Negative Declarations and Environmental Impact Reports, for several new school site development projects, and overseen the public review and comment process for them.

He is also a computer expert, experienced in database programming, development of complex spreadsheets for data presentation and process modeling, and document and information management.

Education

- University of California, Davis – B.S., Environmental Planning & Management
- California State University, Hayward – graduate-level courses in Teacher Education and Environmental Education

- University of San Francisco – candidate, Master of Nonprofit Organization Management

Continuing Education

- Stormwater Management
- CEQA Compliance

Career Experience

Appendix C -- Site Assessment Checklist

RNC ENVIRONMENTAL, LLC

Site Assessment, Regulatory Compliance and Permitting Assistance
3326 M Street, Sacramento, CA 95816
(888)485-3330

Phase I Site Reconnaissance Checklist

RNC Project Number: 1008A

Project Name: *Hollister Family Apartments*
1480 San Juan Road
Address: *Hollister CA*

1. Describe observed land uses:

a. Subject property: Industrial? Yes No

Mostly vacant, with house, shed and junk storage at southwest corner.

b. Adjoining land to the north: Industrial? Yes No

Single-family residential neighborhood.

c. Adjoining land to the east: Industrial? Yes No

Gas station/ mini-mart at southeast corner; restaurant across Miller Road

d. Adjoining land to the south: Industrial? Yes No

San Juan Road (former State Route 156); gas station across from southwest; otherwise vacant.

e. Adjoining land to the west: Industrial? Yes No

Vacant; continuation of parcel of which subject property is a part.

f. Is the property or any adjoining property observed to be Site: Yes No

used as a type of business typically associated with waste Adjacent: Yes No
treatment, storage, disposal, processing, or recycling?

Gas station across San Juan Road

g. Other observations/comments:

Evidence of vehicle maintenance, dumping, etc., on site; does not appear to have been operated as a business.

Phase I Site Reconnaissance Checklist

RNC Project Number: 1008A

Page 2

2. a. Are there any transformers observed on the subject property, or adjacent properties? Site: Yes No

Adjacent: Yes No

Several pole-mounted along south boundary; appear in good condition & fairly new.

b. Do any transformers appear not to be the property of a public utility? Site: Yes No

Adjacent: Yes No

3. Is there any staining of soil observed on the subject property, or adjacent properties? Site: Yes No

Adjacent: Yes No

Leaks from overturned vehicles, oil containers in trash piles.

4. Was stressed or dead vegetation observed during the site reconnaissance, other than seasonal grasses and forbs, on the subject property, or adjacent properties? Site: Yes No

Adjacent: Yes No

5. Are any strong, noxious, or pungent odors observed on the subject property, or from adjacent properties? Site: Yes No

Adjacent: Yes No

Oily odor near vehicles and trash.

6. Have any construction debris, substances identified as hazardous, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials, trash, debris, or refuse observed to have been dumped on the subject property, or adjacent properties? Site: Yes No

Adjacent: Yes No

Abundant trash behind shed; several other piles of abandoned materials across property. Some extends onto west adjacent property.

7. Is there observed evidence that fill dirt has been brought onto the site which originated from a contaminated site or an unknown location? Site: Yes No

Adjacent: Yes No

8. Is there observed evidence of any pesticides, automotive or industrial batteries, paints, or other chemicals being stored or used on the subject property, or adjacent properties? Site: Yes No

Adjacent: Yes No

Stored paints, oils, etc., in 1-5 gallon containers in shed. Numerous empty containers behind shed are mostly food-related, but include some oils & cleaners.

Phase I Site Reconnaissance Checklist

RNC Project Number: 1008A

Page 3

9. Are there any industrial drums or sacks of chemicals observed on the subject property, or adjacent properties? Site: Yes No
Adjacent: Yes No
10. Are there any open or damaged containers containing unidentified substances observed on the subject property, or adjacent properties? Site: Yes No
Adjacent: Yes No
11. Are there any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal? Site: Yes No
Adjacent: Yes No
12. Is there evidence that the subject property or any adjacent property discharges waste water, other than storm water, directly into a ditch or stream on or adjacent to the property? Site: Yes No
Adjacent: Yes No
13. Is there evidence of underground/aboveground storage tanks on the subject property, including vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the subject property? Site: Yes No
Adjacent: Yes No

Gas station across street and adjacent to SE corner.

14. a. Identify the potable water supply source: Public Pvt well Other None
- b. Is there observed evidence of a private well within 1,000 feet? Yes No

Former ag well has been removed.

15. Identify the sewage disposal system: Public Pvt septic Other None

Currently public as reported by owner; likely septic in past.

16. Identify any surface waters, including channels and potential wetlands, on or near the subject property

None on or adjacent. San Benito River is about a half mile to the west.

Phase I Site Reconnaissance Checklist

RNC Project Number: *1008A*

Page 4

17. Describe the subject property and its physical, topographic, and vegetative features.

Level, weedy property, with a house and shed in the southwest corner.

18. a. For each structure on the subject property, describe its uses and location, type of heating and cooling system, whether any readily apparent asbestos-containing materials or potential lead-based paints were observed, and whether there are drains, stains, and/or odors in the structure.

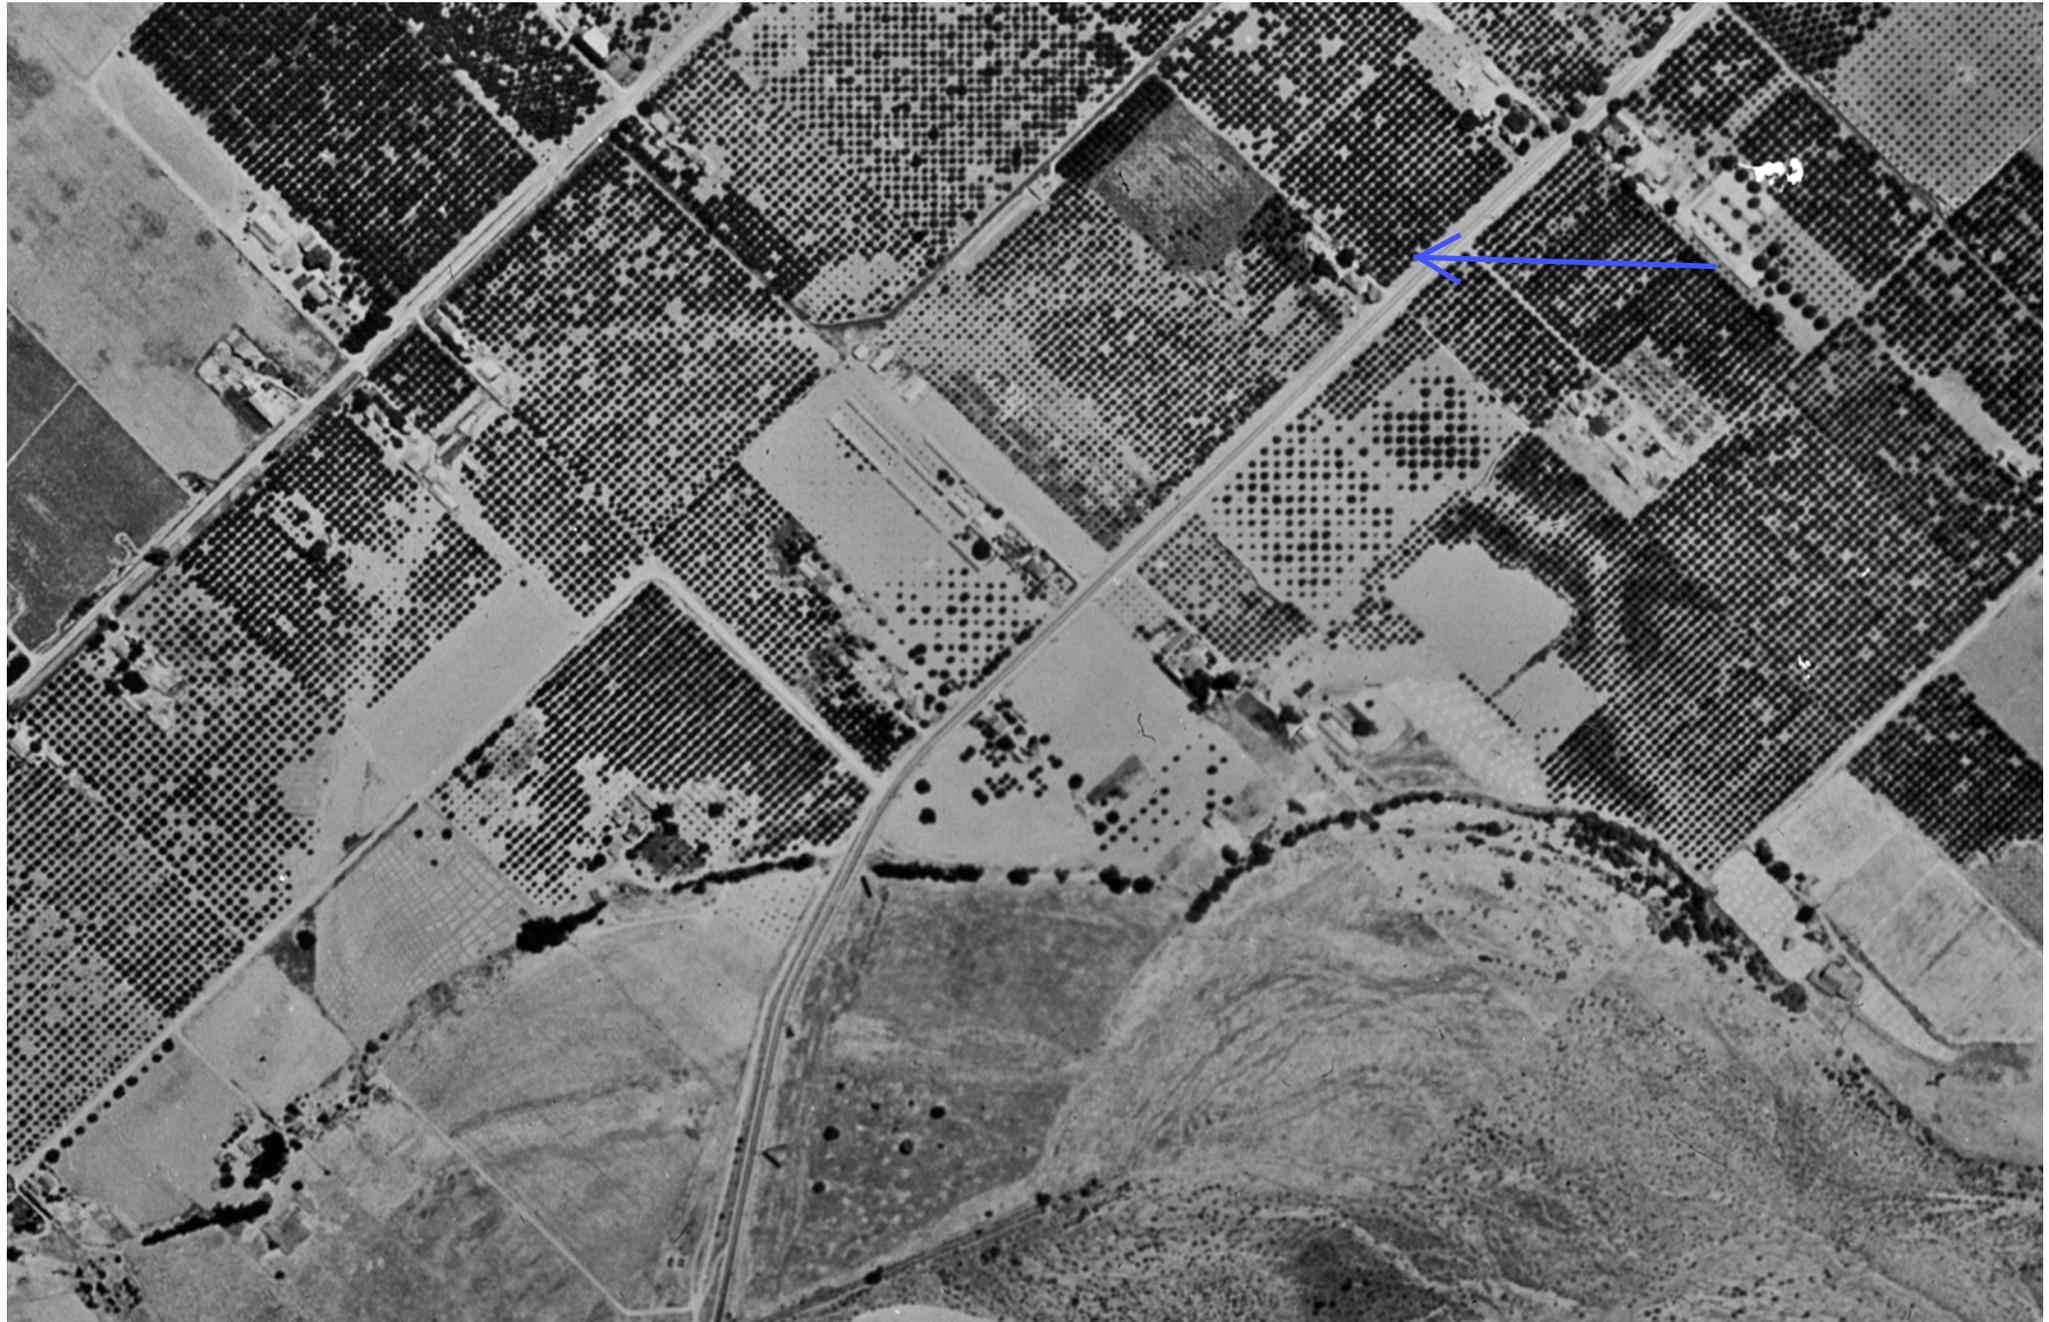

House and storage shed. Electric utilities. No ACM observed, but potentially present due to age of buildings.

Continuations from above (identify by question #):

Site Reconnaissance conducted on *June 2, 2010* by: *Neil O'Hara*

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to TRACK Info Services, certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in TRACK Info Services's databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although TRACK Info Services uses its best efforts to research the actual location of each site, TRACK Info Services does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of TRACK Info Services's services proceeding are signifying an understanding of TRACK Info Services's searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

Environmental FirstSearch Descriptions

NPL: EPA NATIONAL PRIORITY LIST - The National Priorities List is a list of the worst hazardous waste sites that have been identified by Superfund. Sites are only put on the list after they have been scored using the Hazard Ranking System (HRS), and have been subjected to public comment. Any site on the NPL is eligible for cleanup using Superfund Trust money.

A Superfund site is any land in the United States that has been contaminated by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

FINAL - Currently on the Final NPL

PROPOSED - Proposed for NPL

NPL DELISTED: EPA NATIONAL PRIORITY LIST Subset - Database of delisted NPL sites. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

DELISTED - Deleted from the Final NPL

CERCLIS: EPA COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM (CERCLIS)- CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

PART OF NPL- Site is part of NPL site

DELETED - Deleted from the Final NPL

FINAL - Currently on the Final NPL

NOT PROPOSED - Not on the NPL

NOT VALID - Not Valid Site or Incident

PROPOSED - Proposed for NPL

REMOVED - Removed from Proposed NPL

SCAN PLAN - Pre-proposal Site

WITHDRAWN - Withdrawn

NFRAP: EPA COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM ARCHIVED SITES - database of Archive designated CERCLA sites that, to the best of EPA's knowledge, assessment has been completed and has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

NFRAP – No Further Remedial Action Plan

P - Site is part of NPL site

D - Deleted from the Final NPL

F - Currently on the Final NPL

N - Not on the NPL

O - Not Valid Site or Incident

P - Proposed for NPL

R - Removed from Proposed NPL

S - Pre-proposal Site

W – Withdrawn

RCRA COR ACT: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.

RCRAInfo facilities that have reported violations and subject to corrective actions.

RCRA TSD: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM TREATMENT, STORAGE, and DISPOSAL FACILITIES. - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.

Facilities that treat, store, dispose, or incinerate hazardous waste.

RCRA GEN: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM GENERATORS - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.

Facilities that generate or transport hazardous waste or meet other RCRA requirements.

LGN - Large Quantity Generators

SGN - Small Quantity Generators

VGN – Conditionally Exempt Generator.

Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List) facilities.

RCRA NLR: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.

Facilities not currently classified by the EPA but are still included in the RCRAInfo database. Reasons for non classification:

Failure to report in a timely matter.

No longer in business.

No longer in business at the listed address.

No longer generating hazardous waste materials in quantities which require reporting.

Federal IC / EC: EPA BROWNFIELD MANAGEMENT SYSTEM (BMS) - database designed to assist EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield grant Programs.

FEDERAL ENGINEERING AND INSTITUTIONAL CONTROLS- Superfund sites that have either an engineering or an institutional control. The data includes the control and the media contaminated.

ERNS: EPA/NRC EMERGENCY RESPONSE NOTIFICATION SYSTEM (ERNS) - Database of incidents reported to the National Response Center. These incidents include chemical spills, accidents involving chemicals (such as fires or explosions), oil spills, transportation accidents that involve oil or chemicals, releases of radioactive materials, sightings of oil sheens on bodies of water, terrorist incidents involving chemicals, incidents where illegally dumped chemicals have been found, and drills intended to prepare responders to handle these kinds of incidents. Data since January 2001 has been received from the National Response System database as the EPA no longer maintains this data.

Tribal Lands: DOI/BIA INDIAN LANDS OF THE UNITED STATES - Database of areas with boundaries established by treaty, statute, and (or) executive or court order, recognized by the Federal Government as territory in which American Indian tribes have primary governmental authority. The Indian Lands of the United States map layer shows areas of 640 acres or more, administered by the Bureau of Indian Affairs. Included are Federally-administered lands within a reservation which may or may not be considered

part of the reservation.

State/Tribal Sites: CA EPA SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.

The SMBRPD displays information in six categories. The categories are:

1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)

Please Note: FirstSearch Reports list the above sites as DB Type (STATE).

5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)

Please Note: FirstSearch Reports list the above sites as DB Type (OTHER).

Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.

CORTESE LIST-Pursuant to Government Code Section 65962.5, the Hazardous Waste and Substances Sites List has been compiled by Cal/EPA, Hazardous Materials Data Management Program. The CAL EPA Dept. of Toxic Substances Control compiles information from subsets of the following databases to make up the CORTESE list:

1. The Dept. of Toxic Substances Control; contaminated or potentially contaminated hazardous waste sites listed in the CAL Sites database. Formerly known as ASPIS are included (CAL SITES formerly known as ASPIS).
2. The California State Water Resources Control Board; listing of Leaking Underground Storage Tanks are included (LTANK)
3. The California Integrated Waste Management Board; Sanitary Landfills which have evidence of groundwater contamination or known migration of hazardous materials (formerly WB-LF, now AB 3750).

Note: Track Info Services collects each of the above data sets individually and lists them separately in the following First Search categories in order to provide more current and comprehensive information: CALSITES: SPL, LTANK: LUST, WB-LF: SWL

State Spills 90: CA EPA SLIC REGIONS 1 - 9- The California Regional Water Quality Control Boards maintain report of sites that have records of spills, leaks, investigation, and cleanups.

State/Tribal SWL: CA IWMB/SWRCB/COUNTY SWIS SOLID WASTE INFORMATION SYSTEM-The California Integrated Waste Management Board maintains a database on solid waste facilities, operations, and disposal sites throughout the state of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. For more information on individual sites call the number listed in the source field..

Please Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.

WMUDS-The State Water Resources Control Board maintained the Waste Management Unit Database System (WMUDS). It is no longer updated. It tracked management units for several regulatory programs related to waste management and its potential impact on groundwater. Two of these programs (SWAT & TPCA) are no longer on-going regulatory programs as described below. Chapter 15 (SC15) is still an on-going regulatory program and information is updated periodically but not to the WMUDS database. The WMUDS System contains information from the following agency databases: Facility, Waste Management Unit (WMU), Waste Discharger System (WDS), SWAT, Chapter 15, TPCA, RCRA, Inspections, Violations, and Enforcement's.

Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.

ORANGE COUNTY LANDFILLS LIST- A list maintained by the Orange County Health Department.

State/Tribal LUST: CA SWRCB/COUNTY LUSTIS- The State Water Resources Control Board maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks. Information for this database is collected from the states regional boards quarterly and integrated with this database.

SAN DIEGO COUNTY LEAKING TANKS- The San Diego County Department of Environmental Health maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks within its HE17/58 database. For more information on a specific file call the HazMat Duty Specialist at phone number listed in the source information field.

State/Tribal UST/AST: CA EPA/COUNTY/CITY ABOVEGROUND STORAGE TANKS LISTING-The Above Ground Petroleum Storage Act became State Law effective January 1, 1990. In general, the law requires owners or operators of AST's with petroleum products to file a storage statement and pay a fee by July 1, 1990 and every two years thereafter, take specific action to prevent spills, and in certain instances implement a groundwater monitoring program. This law does not apply to that portion of a tank facility associated with the production oil and regulated by the State Division of Oil and Gas of the Dept. of Conservation.

SWEEPS / FIDS STATE REGISTERED UNDEGROUND STORAGE TANKS- Until 1994 the State Water Resources Control Board maintained a database of registered underground storage tanks statewide referred to as the SWEEPS System. The SWEEPS UST information was integrated with the CAL EPA's Facility Index System database (FIDS) which is a master index of information from numerous California agency environmental databases. That was last updated in 1994. Track Info Services included the UST information from the FIDS database in its First Search reports for historical purposes to help its clients identify where tanks may possibly have existed. For more information on specific sites from individual paper files archived at the State Water Resources Control Board call the number listed with the source information.

INDIAN LANDS UNDERGROUND STORAGE TANKS LIST- A listing of underground storage tanks currently on Indian Lands under federal jurisdiction. California Indian Land USTs are administered by US EPA Region 9.

CUPA DATABASES & SOURCES- Definition of a CUPA: A Certified Unified Program Agency (CUPA) is a local agency that has been certified by the CAL EPA to implement six state environmental programs within the local agency's jurisdiction. These can be a county, city, or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994.

A Participating Agency (PA) is a local agency that has been designated by the local CUPA to administer one or more Unified Programs within their jurisdiction on behalf of the CUPA. A Designated Agency (DA) is an agency that has not been certified by the CUPA but is the responsible local agency that would implement the six unified programs until they are certified.

Please Note: Track Info Services, LLC collects and maintains information regarding Underground Storage Tanks from majority of the CUPAS and Participating Agencies in the State of California. These agencies typically do not maintain nor release such information on a uniform or consistent schedule; therefore, currency of the data may vary. Please look at the details on a specific site with a UST record in the First Search Report to determine the actual currency date of the record as provided by the relevant agency. Numerous efforts are made on a regular basis to obtain updated records.

State/Tribal IC: CA EPA DEED-RESTRICTED SITES LISTING- The California EPA's Department of Toxic Substances Control Board maintains a list of deed-restricted sites, properties where the DTSC has placed limits or requirements on the future use of the property due to varying levels of cleanup possible, practical or necessary at the site.

State/Tribal VCP: CA EPA SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.

The SMBRPD displays information in six categories. The categories are:

1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)
5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)

Please Note: FirstSearch Reports list the above sites as DB Type VC. Each Category contains information on properties based upon the type of work taking place at the site. The VC category contains only those properties undergoing voluntary investigation and/or cleanup and which are listed in the Voluntary Cleanup Program.

RADON: NTIS NATIONAL RADON DATABASE - EPA radon data from 1990-1991 national radon

project collected for a variety of zip codes across the United States.

State Permits: *CA COUNTY* SAN DIEGO COUNTY HE17 PERMITS- The HE17/58 database tracks establishments issued permits and the status of their permits in relation to compliance with federal, state, and local regulations that the County oversees. It tracks if a site is a hazardous waste generator, TSD, gas station, has underground tanks, violations, or unauthorized releases. For more information on a specific file call the HazMat Duty Specialist at the phone number listed in the source information field.

SAN BERNARDINO COUNTY HAZARDOUS MATERIALS PERMITS- Handlers and Generators Permit Information Maintained by the Hazardous Materials Division.

State Other: *CA EPA/COUNTY* SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.

The SMBRPD displays information in six categories. The categories are:

1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)
5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)

Please Note: FirstSearch Reports list the above sites as DB Type (STATE).

Please Note: FirstSearch Reports list the above sites as DB Type (OTHER).

Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.

LA COUNTY SITE MITIGATION COMPLAINT CONTROL LOG- The County of Los Angeles Public Health Investigation Compliant Control Log.

ORANGE COUNTY INDUSTRIAL SITE CLEANUPS- List maintained by the Orange County Environmental Health Agency.

RIVERSIDE COUNTY WASTE GENERATORS-A list of facilities in Riverside County which generate hazardous waste.

SACRAMENTO COUNTY MASTER HAZMAT LIST-Master list of facilities within Sacramento County with potentially hazardous materials.

SACRAMENTO COUNTY TOXIC SITE CLEANUPS-A list of sites where unauthorized releases of potentially hazardous materials have occurred.

Appendix F – Title Records

CHICAGO TITLE COMPANY

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, **Chicago Title Company** hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Chicago Title Insurance Company, a Nebraska corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

Matters** contained in that certain document entitled "RESOLUTION CONFIRMING AND ADOPTING ITEMIZED WRITTEN REPORT OF THE COST OF ABATEMENT OF WEEDS AND DEBRIS AS PUBLIC NUISANCES" dated August 7, 1995, executed by CITY OF HOLLISTER recorded August 10, 1995, Instrument No. 9506650, of Official Records.

Reference is hereby made to said document for full particulars.

- 13.** The herein referred to property appears to be free and clear of any Deeds of Trust or Mortgages. Please confirm if this is the case.

- 14.** The name(s) of the buyer(s) furnished with this application for Title Insurance is/are:

Pacific West Communities, Inc.

If these names are incorrect, incomplete or misspelled, please notify the Company.

15. Before issuing its policy of title insurance, this Company will require for review, the following documents from the Limited Liability Company named below.

Limited Liability Company: J. B. Howard Family, LLC

- (a) A copy of its operating agreement and any and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.
- (b) Confirmation that its Articles of Organization (LLC-1), and Certificate of Amendment (LLC-2), any restated Articles of Organization (LLC-10) and/or Certificate of Correction (LLC-11) have been filed with the Secretary of State.
- (c) If the Limited Liability Company is member-managed a full and complete current list of members certified by the appropriate manager or member.
- (d) If the Limited Liability Company was formed in a foreign jurisdiction, evidence satisfactory to the Company, that it was validly formed, is in good standing and authorized to do business in the state of origin.
- (e) If the Limited Liability Company was formed in a foreign jurisdiction, evidence satisfactory to the Company, that it has complied with California "doing business" laws, if applicable.

After review of the requested documents, the Company reserves the right to add additional items or make additional requirements prior to the issuance of any policy of title insurance.

16. This Company will require the following documents for review prior to the issuance of any title assurance predicated upon a conveyance or encumbrance by the corporation named below.

Corporation: Pacific West Communities, Inc.,

- (a) A copy of the corporation By-Laws and Articles of Incorporation.
- (b) An original or certified copy of the Resolution authorizing the transaction contemplated herein.
- (c) If the Articles and/or By-Laws require approval by a "parent" organization, a copy of the Articles and By-Laws of the parent.

The right is reserved to add requirements or additional items after completion of such review.

17. The terms and provisions of that certain Trust Agreement under which the vestee holds title, and the requirement that this office be furnished with:

signed Certification Statement reflecting the current status of said trust,

prior to the issuance of any Title Insurance, and any exceptions that may be disclosed thereby.

- 18. The transaction contemplated** in connection with this Report is subject to the review and approval of the Company's Corporate Underwriting Department. The Company reserves the right to add additional items or make further requirements after such review.

END OF ITEMS

- Note 1.** Property taxes for the fiscal year shown below are PAID. For proration purposes the amounts are:
 Tax Identification No.: 052-090-043
 Fiscal Year: 2009 - 2010
 1st Installment: \$4,602.26
 2nd Installment: \$4,602.26

- Note 2.** The current owner does NOT qualify for the \$20.00 discount pursuant to the coordinated stipulated judgments entered in actions filed by both the Attorney General and private class action plaintiffs for the herein described property.

- Note 3. The application** for title insurance was placed by reference to only a street address or tax identification number.

Based on our records, we believe that the description in this report covers the parcel requested, however, if the legal description is incorrect a new report must be prepared.

If the legal description is incorrect, in order to prevent delays, the seller/buyer/borrower must provide the Company and/or the settlement agent with the correct legal description intended to be the subject of this transaction.

- Note 4.** The Company is not aware of any matters which would cause it to decline to attach the CLTA Endorsement Form 116 indicating that there is located on said land Single Family Dwelling known as 1480 San Juan Road, Hollister, CA to an Extended Coverage Loan Policy.

- Note 5.** The only deeds affecting said land, which recorded within twenty-four (24) months of the date of this report, as are follows:

Grantor:	Joanne Luna, Trustee of the Jess V. Arias and Josephine Arias Revocable Living Trust DTD 6/30/98, as to an undivided 1/3 interest
Grantee:	Joanne Luna as Trustee of the Bypass Trust of the Jess V. Arias and Josephine Arias Revocable Living Trust; DTD 6-30-98
Recorded:	September 8, 2008, Instrument No. 2008-0008759, of Official Records

and
 Grantor: Joanne Luna as Trustee of the Bypass Trust of the Jess V. Arias and Josephine Arias Revocable Living Trust; dated 6-30-98 as to all their interest
 Grantee: J. B. Howard Family, LLC, a California Limited Liability Company as to an undivided 1/2 interest and Craig M. Ritts and Theresa Ritts, Trustees of the Ritts Family Trust utah dated March 31, 2006, as to an undivided 1/2 interest.
 Recorded: January 8, 2010, Instrument No. 2010-0000185, of Official Records

Note 6. If a county recorder, title insurance company, escrow company, real estate broker, real estate agent or association provides a copy of a declaration, governing document or deed to any person, California law requires that the document provided shall include a statement regarding any unlawful restrictions. Said statement is to be in at least 14-point bold face type and may be stamped on the first page of any document provided or included as a cover page attached to the requested document. Should a party to this transaction request a copy of any document reported herein that fits this category, the statement is to be included in the manner described.

Note 7. Wiring instructions for Chicago Title Company, Visalia, CA, are as follows:

Receiving Bank: Bank of America
 275 Valencia Blvd, 2nd Floor
 Brea, CA 92823-6340
 ABA Routing No.: 026009593
 Credit Account Name: Chicago Title Company - Visalia
 1750 W. Walnut Avenue, Visalia, CA 93277
 Credit Account No.: 12355-73185
 Escrow No.: 09-**42113340**-AK

These wiring instructions are for this specific transaction involving the Title Department of the Hollister office of Chicago Title Company. These instructions therefore should not be used in other transactions without first verifying the information with our accounting department. It is imperative that the wire text be exactly as indicated. Any extraneous information may cause unnecessary delays in confirming the receipt of funds.

Note 8. Any documents being executed in conjunction with this transaction must be signed in the presence of an authorized Company employee, an authorized employee of an agent, an authorized employee of the insured lender, or by using Bancserv or other approved third-party service. If the above requirements cannot be met, please call the company at the number provided in this report.

G R A N T D E E D

For value received, we, MANUEL A. MELLO and MARGARET E. MELLO, husband and wife, hereby grant to SEPAPINO MELLO, a single man, all that real property situate in the County of San Benito, State of California, described as follows:

Lots 21 and 22 of the Subdivision of the Riverside Farm, according to the map thereof filed July 28, 1892, in Vol. 1 of Maps, at Page 56, San Benito County Records, containing 17.87 acres, more or less.

Excepting from said Lot 21 the West 86 feet thereof.

Excepting from said Lot 22 the easterly 0.80 feet thereof.

Together with an undivided 5/8ths interest in and to the certain irrigation well and pumping plant on the certain real property of the grantors contiguous to the real property hereby conveyed on the east, and the right and easement to convey the waters of said well to the real property hereby conveyed for irrigation purposes over and across said real property of grantors by means of open ditches along such route or routes as grantee shall from time to time select; provided, however, that any such water which is conveyed along said Hollister-San Juan Highway shall be conveyed through underground or surface pipe line. Grantee shall fill in all ditches which are from time to time made by him for such conveyance of water promptly after each irrigation.

The cost of maintenance, upkeep and repair of said well and pumping plant shall be borne and paid by and between the parties hereto as follows: 3/8ths thereof by grantors and 5/8ths thereof by grantee. Grantors shall bear and pay the entire cost of operation of said pumping plant while they are using same. Grantee shall bear and pay the entire cost of operation of said pumping plant while he is using the same.

No U.S. Revenue Stamps Required

M. A. M.
M. E. M.

Grantee shall have the use, not exclusive of the grantors, of the certain water tank, and any replacements thereof, on said real property of grantors for the purpose of conveying water to said water tank from said irrigation well and thence to the real property hereby conveyed, for domestic uses, by means of a pipe line. The location of said pipe line shall be designated by grantors. The cost of maintenance, repair and replacement of said water tank shall be borne and paid one-half by the grantors and one-half by the grantee.

Grantors hereby except and reserve the right and easement to use the east 20 feet of the real property hereby conveyed for the purpose of turning their cultivating equipment thereon, provided that such turning will not damage any trees or crops growing thereon, or interfere with grantee's farming operations thereon.

Grantors hereby grant to the grantee the right and easement to use the west 20 feet of said real property of grantors for the purpose of turning his cultivating equipment thereon, provided that such turning will not damage any trees or crops growing thereon, or interfere with grantors' farming operations thereon.

Re: Hollister Family Apartments
Phase II Environmental Site Assessment

Dear Mike:

Pursuant to our agreement, we have conducted a Phase II investigation for the Hollister Family Apartments property. The subject property is located at 1480 San Juan Road in Hollister, San Benito County, California, and is comprised of a 4.0± acre parcel identified as the east half of APN 052-090-043.

This work was conducted concurrently with our Phase I assessment for the same property. Preliminary information obtained for the assessment found that the property had historically been used as an orchard. Additional concerns were noted, based on observed debris and soil stains at the time of the site visit, and on the present owner reporting the two houses previously located on the property has been burned.

Because extremely persistent pesticides, such as arsenic compounds and organochlorines such as DDT, were frequently applied to agricultural fields in the past, there is a potential concern for residual concentrations of these chemicals to remain present in the soil at levels considered unacceptable for residential use by regulatory agencies. In order to further evaluate this potential concern, soil sampling for arsenic and chlorinated hydrocarbon pesticides is advisable.

Also, incomplete combustion from a structure fire can result in the creation of carcinogenic polynuclear aromatic hydrocarbons (PAHs). These substances are normally airborne in the event of a fire, but can settle locally and create soil contamination.

Methodology

This assessment was conducted accordance with ASTM E1903-97, Standard Guide for Environmental Site Assessments: Phase II Environmental Site Assessment Process. The scope of the sampling and analysis protocol was based on the Interim Guidance for Sampling Agricultural Fields for School Sites (Third Revision), published by the

California Department of Toxic Substances Control , California Environmental Protection Agency, August 7, 2008.

A total of eight sample locations were established; six were distributed evenly throughout the property, and two were located in the debris area north of the shed, where oil stains and odors were observed. (See attached map.) At each sample location, one soil sample was collected from the top 6 inches of the soil. The samples were collected at the time of the site visit for the Phase I assessment, June 2, 2010

Four of the six field samples, and the two debris-areas samples were submitted to a California certified analytical laboratory. The field samples were analyzed for organochlorine pesticides by EPA Method 8081, and for arsenic. The two debris-area samples were analyzed for total petroleum hydrocarbons; benzene, toluene, ethylbenzene, and xylenes (BTEX); and semi-volatile organic compounds (including PAHs). The laboratory analysis report is attached.

Results of Analysis

No organochlorine pesticides were detected in any of the samples. Arsenic concentrations ranged from 6.6 to 7.3 mg/kg.

Arsenic is present in excess of the CHHSL of 0.07 mg/kg. However, arsenic commonly occurs in natural background concentrations that exceed the CHHSL. The DTSC *Interim Guidance for Sampling Agricultural Fields for School Sites* states that:

The DTSC Schools Program evaluated data from a large number of school sites across California. The data evaluation indicates that 12 mg/kg maybe a useful screening number for the Schools Program when evaluating arsenic as a COPC (Chemical of Potential Concern). If the proposed school property has been adequately characterized for arsenic and all the arsenic data are equal to or less than 12 mg/kg, then arsenic will be not be considered a COPC.

The detected arsenic concentrations of 6.6 to 7.3 mg/kg on this site meet this criteria, so no further evaluation of arsenic is required.

No PAHs were detected. No gasoline, diesel, or BTEX was detected. Motor oil was detected in the two samples tested at 52.1 and 70.2 mg/kg. Although there is no established CHHSL for petroleum hydrocarbons, RWQCB guidelines generally do not require further evaluation of a site for concentrations of less than 100 mg/kg. Concentrations as high as 500 mg/kg of motor oil can be considered acceptable for

*June 8, 2010
RNC Environmental Project # 1008B
Hollister Family Apartments
Page 3*

residential soil. The detected oil concentrations are well below these levels, so no further evaluation of petroleum hydrocarbons is required.

Conclusion

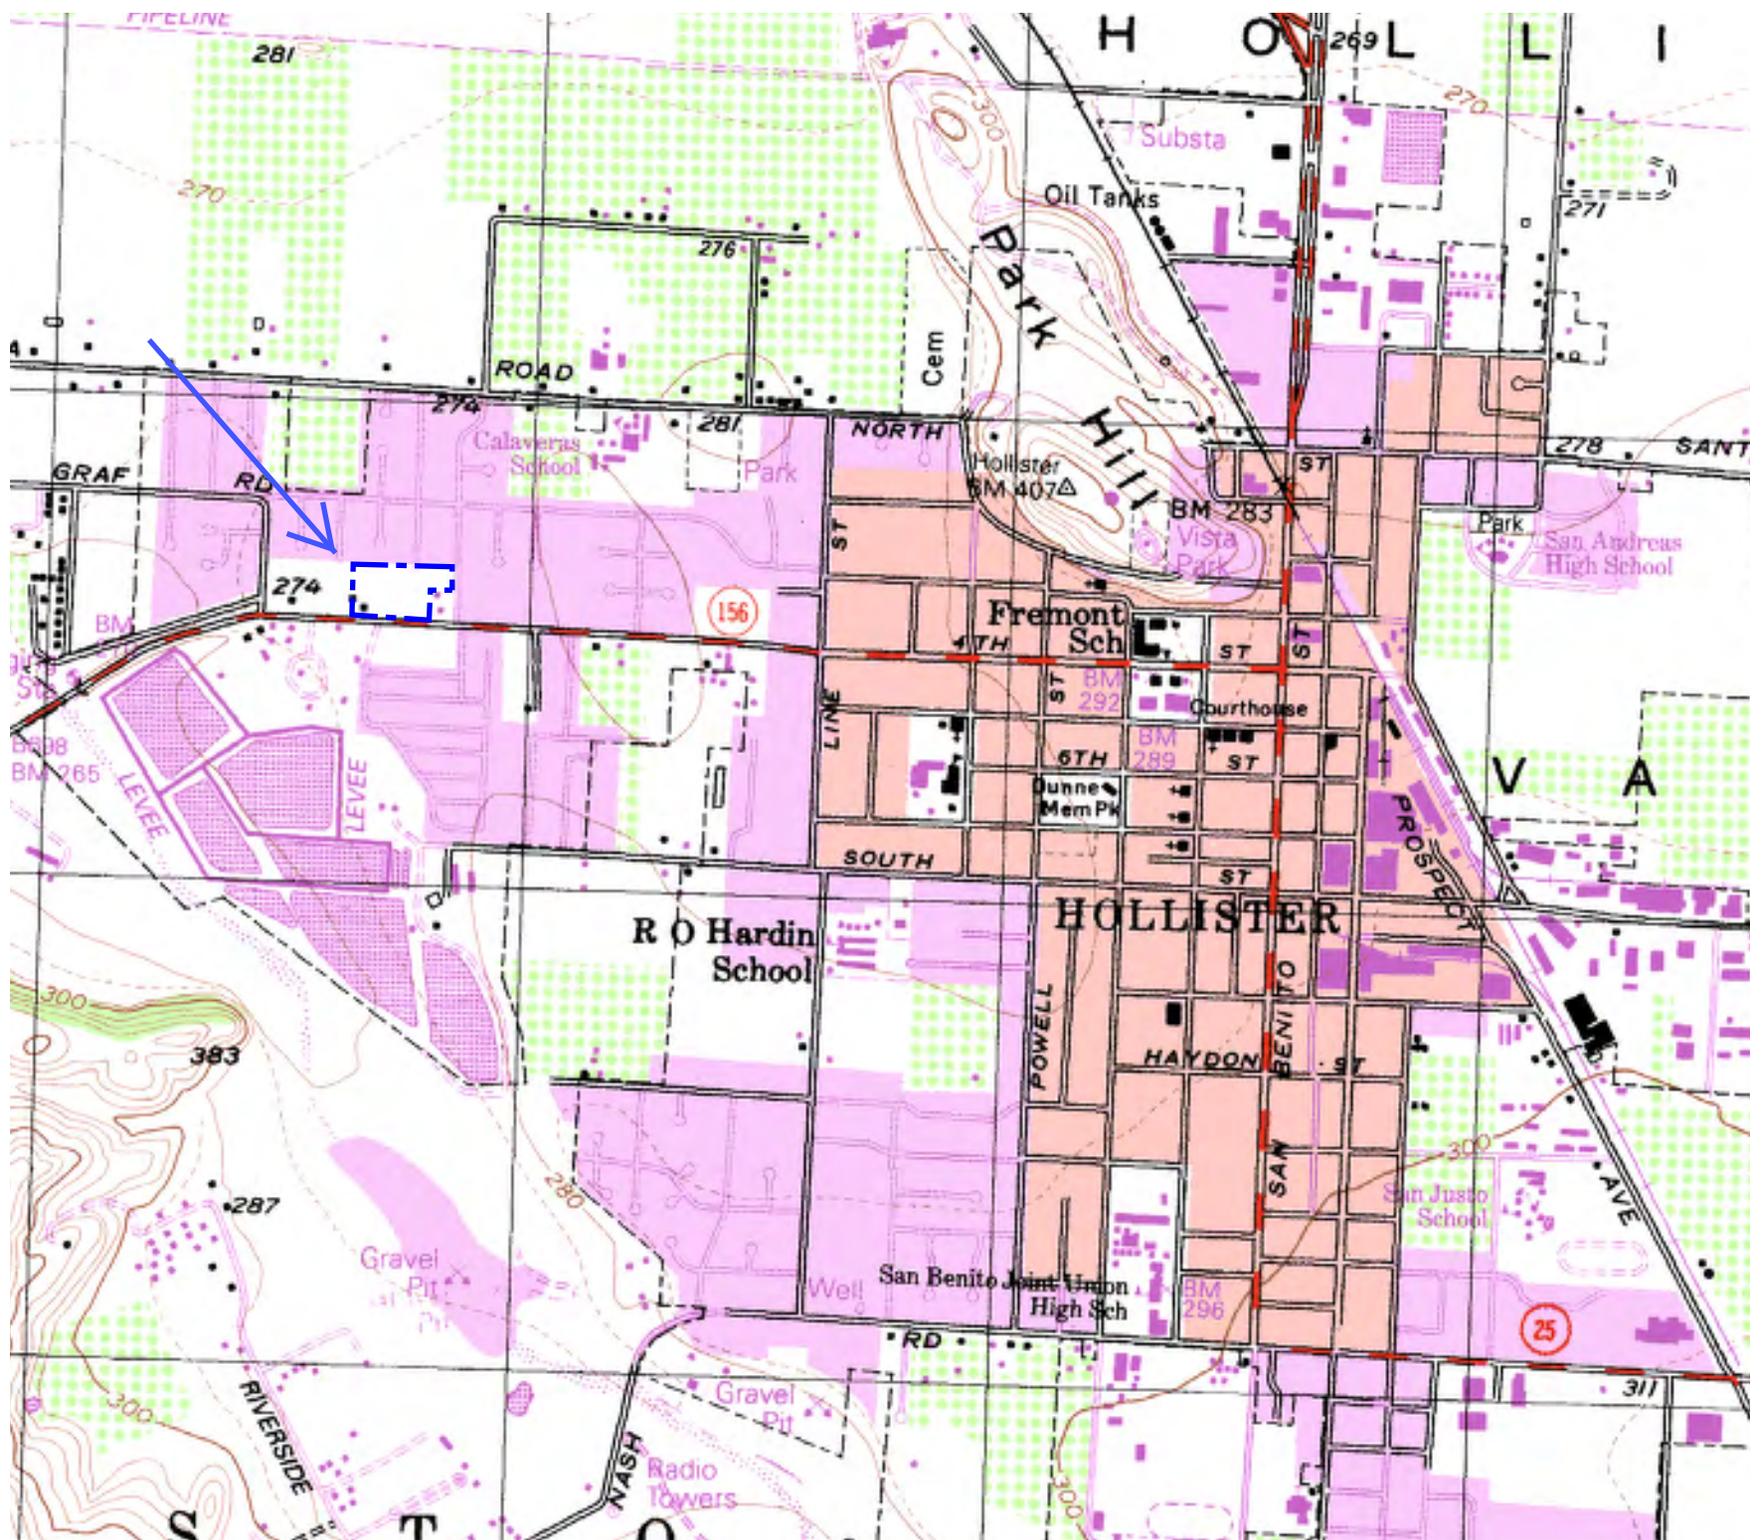

Based on the findings of this assessment, there is no evidence that past agricultural practices, inappropriate disposal of petroleum fluids, or the burning of tow former structures on this site has resulted in the presence of chemicals of concern which might represent a health hazard to future residents of the Hollister Family Apartments.

Sincerely,
RNC Environmental

Notes and Definitions

- S-LOW Low surrogate recovery confirmed as a matrix effect by a second analysis.
- S-06 The recovery of this surrogate is outside control limits due to sample dilution required from high analyte concentration and/or matrix interference's.
- R-07 This sample was diluted due to matrix interference, resulting in elevated reporting limits
- QL-01 Sample results for the QC batch were accepted based on LCS/LCSD percent recoveries and RPD values.
- ND Analyte not detected at reporting limit.
- NR Not reported

Appendix H – Additional Documentation

USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “Brownfields Amendments”), any additional user of this report should complete a copy of this questionnaire in order to document their own knowledge of the property. Failure to document this information could result in a determination that “all appropriate inquiry” is not complete, should a previously unknown recognized environmental condition come to light at a later date.

	Yes	No
(1.) Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?		
(2.) Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?		
(3.) Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?		
(4.) (a.) Is the purchase price being paid for this property significantly less than the fair market value of the property? (b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?		
(5.) Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, do you know the past uses of the property? Do you know of specific chemicals that are present or once were present at the property? Do you know of spills or other chemical releases that have taken place at the property? Do you know of any environmental cleanups that have taken place at the property?		
(6.) Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?		

For each “Yes” answer, please attach a description or supporting documentation as appropriate, for your files.

ENVIRONMENTAL QUESTIONNAIRE AND DISCLOSURE STATEMENT

1. Name of person completing this questionnaire: John B. Howard
2. This person's association with the subject property:
 Current Owner Previous Owner Property Manager Occupant
 Other : _____

Please answer the following questions in good faith and to the best of your knowledge. Please be as specific as reasonably feasible. For "Yes/No" answers, please provide details and/or supporting documentation, as appropriate, on attached sheets.

3. Who is the current owner of property? What year was the property purchased?

John B. Howard, Craig Ritts

4. Do you know the identity of any previous owners? What years did they own the property?

n/a Matulich Family Farms

5. Please describe current use(s) of property:

RGU/10/

6. Please describe any other known past use(s) of property, and approximate dates of each use:

n/a Farming until approx 1980
VACANT LAND BECAME FOR SINGLE FAMILY HOME REUSE

7. Please provide copies of any available documents you think may be useful to us, such as asbestos or lead paint surveys, building plans, site boundary and topography or ALTA surveys, etc.

8. Are there any businesses using any portion of the property which are operated by an Yes No entity other than the property owner (including a tenant farming operation)? If yes, please provide a contact name and phone number for each.

RNC Project Number: 1008A
Property Location: 1480 San Juan Road
Page 2
Hollister, CA

9. To the best of your knowledge has the property ever been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility? Yes No

10. To the best of your knowledge has any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility? Yes No

11. Do you have any knowledge of environmental liens or governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property? Yes No

12. Do you have any knowledge of the past or current existence of hazardous substances or petroleum products or environmental violations with respect to the property or any facility located on the property? Yes No ³
GAS REPAIR STATION ACROSS THE STREET HAD TANK 1996 HAS SINCE BEEN REMEDIATED

13. Are you aware of any spills, leaks, or other releases of chemicals on the property? If so, please describe the chemicals and quantities released, any cleanup measures taken, and the results of any soil or groundwater samples performed to detect the presence of chemicals spilled, leaked, or released on the property. Yes No ³

14. Are there any wastewaters generated and/or disposed of on the property, other than stormwater runoff and domestic sewage? Please describe. (Please attach copies of any wastewater discharge permits or licenses pertaining to operations on the property.) Yes No

15. Are there any other types of liquid wastes and solid wastes generated at the property? Please describe how they are handled and disposed of. (Please attach copies of any waste disposal permits or licenses pertaining to operations on the property.) Yes No

16. Are there any activities on the property which generate air pollutants, including fuel burning equipment? Please describe. (Please attach copies of any air permits or licenses pertaining to operations on the property.) Yes No

17. Are there currently any structures on the property? Yes No

18. To the best of your knowledge, have there been any structures on the property in the past which have since been removed? Yes No ⁴

RNC Project Number: 1008A
Property Location: 1480 San Juan Road
Page 3 Hollister, CA

If the answer to question 17 and/or 18 is "yes," please provide the following:

For each building, please describe type and use of building, type of heating/cooling system, date of original construction, date of any substantial renovations. For removed buildings, include year of removal.

2 SPR'S AGR & SYSTEM UNKNOWN IN 1980' - CITY BOARD
WITH CONSENT AND (1) BOARD ACCIDENTALLY

19. Are there currently, or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors? Yes No
20. Are there any electrical transformers or capacitors on the property which are known to contain PCBs (Polychlorinated biphenyls), or which may have been manufactured before 1980 and whose PCB content is unknown? Yes No
21. Water is provided to the property by:
 A well Public water system N/A
22. Waste water disposal is provided to the property by:
 Public sewer system On-site septic system Pond(s)
 Other N/A
23. Are there currently, or to the best of your knowledge have there been previously, any registered or unregistered gasoline, diesel, fuel oil or other chemical storage tanks (above or underground) located on the property? Yes No
24. Are any pesticides, paints, or other chemicals stored or used on the property in drums, sacks or other containers greater than 5 gallons each or 50 gallons in the aggregate? Yes No

If the answer to question 23 and/or 24 is "yes," please provide the following:

For each tank, please list substance stored and tank capacity. Have the tanks been inspected or tested for leakage? When was the most recent test? What were the results? (Please attach copies of results if available). For other storage containers, please describe the substances, quantities stored, and types of containers. Please attach copies of any permits or licenses pertaining to the use, storage, handling, or disposal of chemicals on the property.

25. Is the property currently used for any industrial purpose? Yes No
26. Has the property ever been previous used for an industrial purpose (other than the current use)? Yes No

If the answer to question 25 and/or 26 is "yes," please provide the following:

If any of questions 1-4 are answered "yes," please provide a description, including the location of all disposal sites, treatment facilities and storage areas, the type of chemicals or wastes handled at each site, the results of any soil or groundwater samples taken in the vicinity of each site, and the manner in which each site not presently in use was closed.

RNC Project Number: 1008A

Property Location:

Page 4 1480 San Juan Road
Hollister, CA

27. Is the property currently used for agricultural purposes, other than grazing or pasture land? Yes No

28. To the best of your knowledge, has the property been used in the past for agricultural purposes, other than grazing or pasture land? Yes No

If the answer to question 27 and/or 17 is "yes," please provide the following:

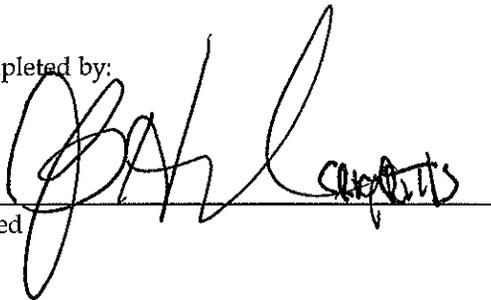

Please describe the locations where pesticides, herbicides or chemicals were applied to the property, and the type of pesticides, herbicides or chemicals applied in each area. (Please attach copies of pesticide use reports if available.)

Please describe the locations where pesticides, herbicides or chemicals were mixed, formulated, rinsed, or disposed, and the type of pesticides, herbicides or chemicals mixed, formulated, rinsed or disposed of at each location.

29. Please describe any other relevant historical information in your possession concerning the subject property.

Re: 1480 San Juan Road, Hollister, CA
Well Destruction Report

Dear J.B.:

I recently reviewed the May 18, 2004 Well Destruction Report from Toxichem. It appears that all the wells on your property have been successfully and properly destroyed. Please inspect your property to determine whether there was any damage caused by the contractors. If there was, we should make a claim promptly. If I do not hear from you, then I will assume that there was no noticeable damage. The Victory Gas and Food, Inc. property will now be seeking closure before the Regional Water Quality Control Board. At this point I see no reason for us to interfere in that process.

I will keep you informed as matters progress. Please call me if you have any questions or concerns.

Very truly yours,

Ms. Maria Eiro
Victory Gas and Food Corporation
287 Vega Road
Watsonville, CA 95076

Dear Ms. Eiro:

UGT: 1615 SAN JUAN ROAD, HOLLISTER, VICTORY GAS AND FOOD CORPORATION; CASE CLOSURE TRANSMITTAL (RWQCB CASE NO. 3319)

Regional Board staff have reviewed Toxichem Management System, Inc.'s May 18, 2004, *Well Destruction Summary* report and previously submitted *Case Closure Summary* form for the subject site. Thank you for submitting this information. The requirements for case closure have been met. This case is now closed as certified by the enclosed Case Closure letter.

This concludes the Regional Board's regulatory oversight for the investigation and cleanup of the former release. This letter does not relieve you of other agency's requirements, which may continue to have jurisdiction or require further work. As with any real property, additional or previously identified contamination at the site may require additional investigation and cleanup.

Thank you for your diligence in addressing water quality issues at the subject site and your continued commitment to the protection of water quality in the Central Coast Region. If you have any question regarding this matter, please call **Burton Chadwick at (805) 542-4786.**

Sincerely,

Roger W. Briggs
Executive Officer

Re: **Well Destruction Summary**
Victory Gas and Food, Inc.
1615 San Juan Road, Hollister, California

Dear Mr. Chadwick:

On behalf of Victory Gas and Food, Inc., this letter prepared by Toxicchem Management Systems, Inc. (TOXICHEM) summarizes the well destruction activities recently performed in association with the site referenced above (see Figure 1, Site Vicinity Map and Figure 2, Site Plan). The work was performed in response to the RWQCB's letter dated October 23, 2003, regarding case closure.

One abandoned irrigation supply well on the Howard property, located across San Juan Road from the subject site to the north, was destroyed. One dual-phase extraction well, one vapor extraction well and three groundwater monitoring wells, located on the subject site were also destroyed. Additionally, eight groundwater monitoring wells located on the Howard property were destroyed.

Abandoned Irrigation Supply Well

The abandoned irrigation supply well on the Howard property (1480 San Juan Road) was 12 inches in diameter, with a steel casing (see Figure 3, Study Area Plan). No other construction details were known prior to the destruction.

The well was destroyed on April 6 and 7, 2004. Maggiora Bros. Drilling, Inc., a C-57-licensed drilling contractor, destroyed the well under San Benito County Environmental Health Services (SBCEHS) permit number WP 03-166. A copy of the permit is included in Appendix A.

A drill rig utilizing the mud rotary method was used to drill out the soil debris inside the casing. Initially, a 12-inch-diameter drill bit was used until an obstruction was encountered at a depth of approximately 15 feet. A 8-inch-diameter drill bit was then used for the remainder of the operation. The bottom of the well was encountered at approximately 125 feet. After drilling out the soil debris in the casing, the well was then sealed to the surface with 10-sack sand slurry introduced with a tremie pipe.

A copy of the DWR Well Completion Report completed for the destruction is included in Appendix B.

Dual-Phase Extraction, Vapor Extraction and Groundwater Monitoring Wells

The dual-phase extraction well (DE-1), the vapor extraction well (VE-1) and the three groundwater monitoring wells (MW-1, MW-2A and MW-2B), located on the subject site were destroyed on April 6, 2004 (see Figure 2). Additionally, eight groundwater monitoring wells (MW-3A, MW-3B, MW-4A, MW-4B, MW-5A, MW-5B, MW-6A and MW-6B) located on the Howard property were destroyed the same date (see Figure 3). Table 1 summarizes the well construction details.

The wells were destroyed by Exploration Geoservices, Inc., a C-57-licensed drilling contractor, under permits issued by the SBCDEH. The permit numbers are WP 04-032 through WP 04-044. Copies of the permits are included in Appendix A.

The wells were all destroyed by pressure grouting with neat cement. It was calculated a minimum of 310 gallons of grout was necessary to seal the casings and filter packs of all wells. A total of approximately 430 gallons of grout was used to pressure-grout the wells.

Copies of the DWR Well Completion Reports completed for the destructions are included in Appendix B.

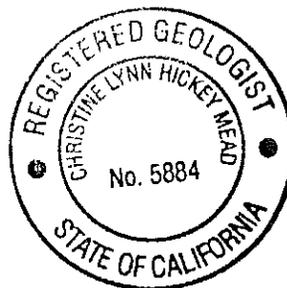

Now that the wells have been destroyed, TOXICHEM recommends that the RWQCB formally close this case. If you have any questions, please contact me at your convenience in the Monterey Bay office at (831) 423-7673.

Sincerely,

Toxichem Management Systems, Inc.

Christine L.H. Mead, RG 5884
Senior Geologist

Watsonville, CA 95076

Dear Ms. Eiro:

UGT: 1615 SAN JUAN ROAD, HOLLISTER, VICTORY GAS AND FOOD CORPORATION; CASE CLOSURE TRANSMITTAL (RWQCB CASE NO. 3319)

Regional Board staff have reviewed Toxichem Management System, Inc.'s May 18, 2004, *Well Destruction Summary* report and previously submitted *Case Closure Summary* form for the subject site. Thank you for submitting this information. The requirements for case closure have been met. This case is now closed as certified by the enclosed Case Closure letter.

This concludes the Regional Board's regulatory oversight for the investigation and cleanup of the former release. This letter does not relieve you of other agency's requirements, which may continue to have jurisdiction or require further work. As with any real property, additional or previously identified contamination at the site may require additional investigation and cleanup.

Thank you for your diligence in addressing water quality issues at the subject site and your continued commitment to the protection of water quality in the Central Coast Region. If you have any question regarding this matter, please call **Burton Chadwick at (805) 542-4786.**

Sincerely,

Roger W. Briggs
Executive Officer

Dear Ms. Eiro:

UGT: 1615 SAN JUAN ROAD, HOLLISTER, VICTORY GAS AND FOOD CORPORATION; CASE CLOSURE (RWQCB CASE NO. 3319)

This letter confirms the completion of site investigation and remedial action for the underground storage tanks located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the underground storage tanks are greatly appreciated.

Based on the information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

If you have any question regarding this matter, please call **Burton Chadwick at (805) 542-4786.**

Sincerely,

Roger W. Briggs
Executive Officer

CASE CLOSURE SUMMARY
Leaking Underground Fuel Storage Tank Program

I. Agency Information

Agency Name: RWQCB - Central Coast Region	Address: 895 Aerovista Place, Suite 101
City/State/Zip: San Luis Obispo, CA 93401	Phone: (805) 542-4786
Responsible Staff person: Burton Chadwick, RG, CHG	Title: Associate Engineering Geologist

II. Case Information

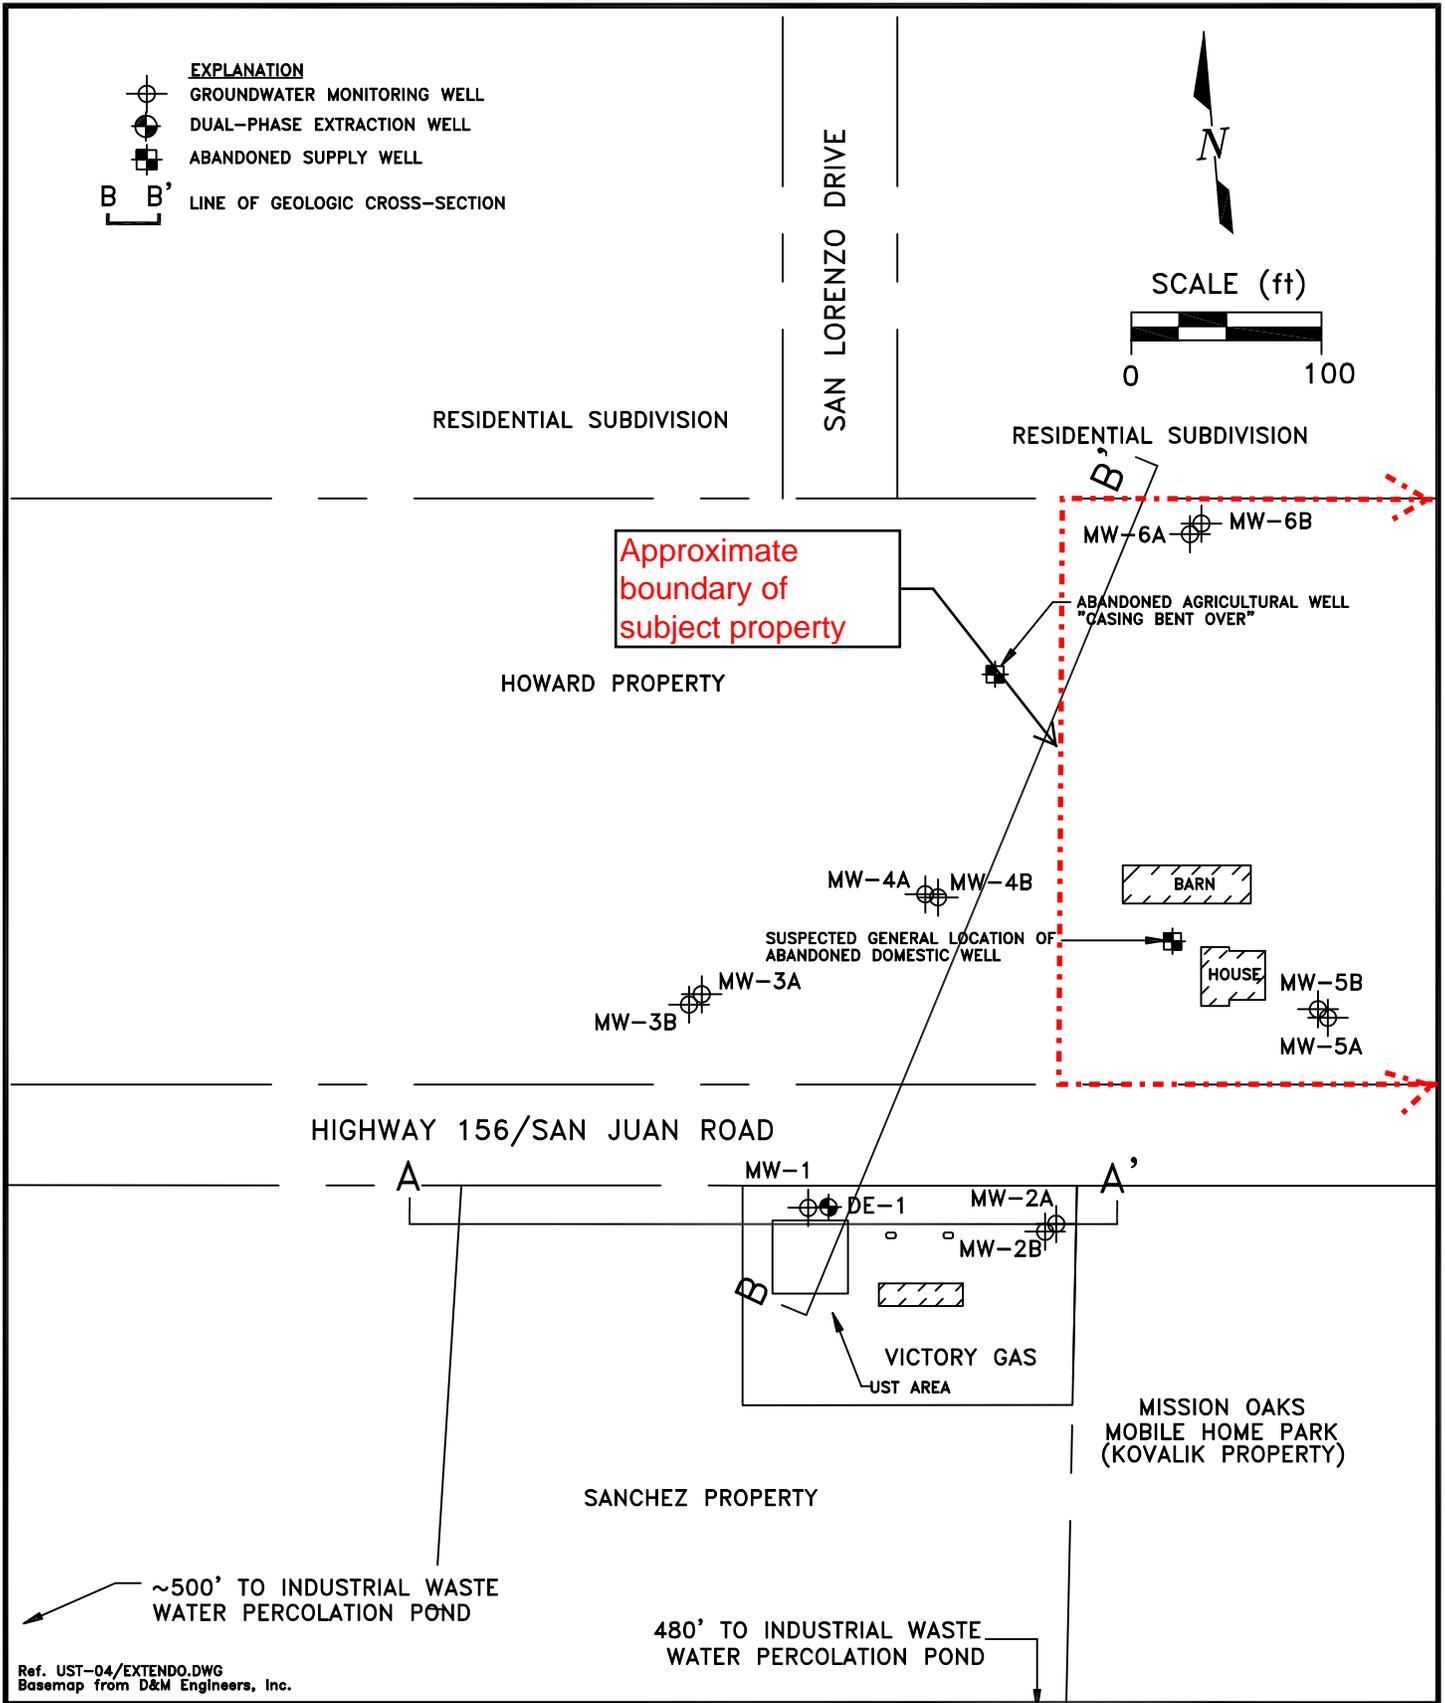

Site Facility Name: Victory Gas and Food, Inc.		LUSTIS Case #: 3319
Site Facility Address: 1615 San Juan Road, Hollister, California		
Responsible Parties	Address	Phone Number
Victory Gas and Food, Inc.	287 Vega Road, Watsonville, CA 95076	831-247-3166

III. Tank Information

Tank #	Size in Gallons	Contents	Closed in Place/Removed	Date
1	unknown	Gasoline	Removed	06/14/99
2	unknown	Gasoline	Removed	06/14/99
3				
4				
5				

IV. Release and Site Characterization Information

Cause and Type of Release: Gasoline release from former USTs and former westernmost dispenser		
Site Characterization Complete? Yes	Date Approved by Oversight Agency: 12/12/02	
Monitoring Wells Installed? Yes	Number: 12	Proper Screened interval? Yes
Highest GW Depth Below Ground Surface: 33.60'	Lowest: >50'	Flow Direction: Northeast - East
Most Sensitive Current GW Use: Former drinking water		
Are Drinking Water Wells Affected? No	Aquifer Name: Unconfined aquifer	
Is Surface Water Affected? No	Nearest affected SW name:	
Off-site Beneficial Use Impacts (addresses/locations): None

Hazardous wastes are managed under the Resource Conservation and Recovery Act. When these wastes contaminate the land, water or air they must undergo "corrective action."

If this corrective action site has been examined to determine if human exposures to contaminants are under control and the migration of contaminated water is under control, that information is provided below.

Human Exposure Control

At this site, human exposures are under control.

A Remedy construction has been completed for this corrective action site

[View detailed list of cleanup activities >>](#)

Migration of Contaminated GW Control

At this site, there is currently insufficient information to determine whether migration of contaminated groundwater is under control.

[View information on what controls are in place to protect human health and the environment >>](#)

Contamination & Exposure

Contamination:

Information on the contamination and the reason for the cleanup may be available. For further information, see the contact information provided above, or try the Statement of Basis Web Page to see if a Statement of Basis for the corrective action remedy has been provided to EPA.

Exposure:

Is human exposure to contamination at this site under control? YES
Is the migration of contaminated groundwater at this site under control? UNKNOWN

The Solution: Cleanup Process & Progress

Cleanup Activities at this site:

Action	Date/Status
1. <u>Site Assessed</u>	06/30/1995
2. <u>Site Identified for Corrective Action</u>	NO
3. <u>Solution for Cleanup Selected (Final Remedy Decision)</u>	UNKNOWN
4. <u>Solution for Cleanup is Implemented</u>	01/01/2009
5. <u>Cleanup Complete</u>	UNKNOWN

Controls in Place at this site:

There are many types of controls that can be put in place to control human exposure to contaminants and the migration of contaminated groundwater from the site, and protect the effectiveness of cleanup remedies. Engineering Controls are mechanisms that work by physically controlling access to the land, the flow of water, etc. Examples include fences, cement caps over contaminated areas, and pumps. Institutional Controls (ICs) (also known as land use controls (LUCs) [EXIT disclaimer >](#)), activity and use limitations (AULs), and environmental use restrictions (EURs) are administrative and/or legal controls, that work by limiting land or resource use. Private or (proprietary) examples include deed restrictions, covenants and easements. Public (or governmental) examples include zoning ordinances and groundwater permitting programs.

Are controls in place at this site?	Type of Control(s):
<u>Institutional Controls:</u> UNKNOWN	N/A
<u>Engineering Controls:</u> UNKNOWN	N/A

Government Performance & Results Act (GRPA) Milestones

EPA is required to report on the following milestones under the Government Performance & Results Act. [More Information...](#)

Milestone	Status

TRAFFIC IMPACT STUDY
HOLLISTER FAMILY APARTMENTS
THE PACIFIC COMPANIES
HOLLISTER, CALIFORNIA

1.0 INTRODUCTION

Neil O. Anderson and Associates (NOA) have been retained by The Pacific Companies to conduct a Traffic Impact Study (TIS) for the new Hollister Family Apartments located at the corner of San Juan Road and Miller Road, in Hollister, California.

The purpose of a Traffic Impact Study is to provide sufficient information concerning the impacts of the project on the operational conditions of the transportation facilities in the project area. The TIS was prepared based on the California Department of Transportation "Guide for the Preparation of Traffic Impact Studies" dated December 2002. The area of study included the intersections of San Juan Road, Miller Road, and Live Oak Drive.

2.0 PROJECT DESCRIPTION

The project consists of a new 66 multi-family residential affordable housing complex to be located on the eastern portion of an existing 8.0 acre open lot. In the southeast corner of the lot an existing commercial business is currently operating. The subject property is located within the City of Hollister. **Appendix A - Plate 1** shows the general area of the subject property. **Appendix A - Plate 2** depicts the proposed architectural design improvements for the site.

The proposed residential traffic will access the project site through one side entrance off of Miller Road, and one back entrance off of Gonzalez Drive. The side entrance off of Miller Road is located on the eastern side of the project site. The other back entrance off of Gonzalez Drive is located on the northern side of the project site. Traffic to and from the site could potentially affect one (1) nearby intersection.

The study area included the offset intersection of San Juan Road, Miller Road, and Live Oak Drive. The geometry of the intersection is as follows:

- San Juan Road Eastbound – Consists of one thru lane, one right turn pocket, and one left turn pocket.
- San Juan Road Westbound – Consists of one thru lane, one right turn pocket, and one left turn pocket.
- Miller Road Southbound – Consists of one shared lane for thru, left, and right turning.
- Live Oak Drive Northbound – Consists of one shared lane for thru, left, and right turning.

The offset within the intersection occurs between the southbound and northbound lanes of Miller Road and Live Oak Drive. Miller Road is offset approximately 50 feet to the west of Live Oak Drive. Although this offset is significant, thru traffic along Miller Road and Live Oak Drive was not required to turn onto San Juan Road during traffic movement.

The City of Hollister Development Services Planning Division expressed concern about this intersection in their letter dated November 24, 2009. Our study was generally limited to the items of concern expressed within the City's letter for this intersection. The City's letter is attached in **Appendix D**.

3.0 SETTING

3.1 Significance Standards

A project would normally have a significant effect on the environment if it would cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system or change the condition of the existing street in a manner that would substantially affect the access or traffic load and capacity of the street system.

The specific criteria utilized for this analysis are as follows:

Intersection Level of Service (LOS) Criteria: A project-related or cumulative traffic impact is considered to be significant if the proposed project:

- Causes the existing baseline level of service to degrade to worse than LOS D at any intersection.
- Causes queues at an intersection to spill back out of their available storage or into adjacent intersections.

Site and Circulation Impact Criteria: A site and circulation impact is considered to be significant if the project:

- Results in interference with traffic flow on public streets at site access driveways;
- Results in potential internal circulation conflicts for pedestrians or motorists;
- Results in insufficient or inadequate accessibility for delivery or service vehicles that would interfere with traffic flow; or
- Results in circulation patterns that are inconsistent with General Plan policies.

LOS is defined by the Highway Capacity Manual¹ as a quality measure describing operational conditions within a traffic stream, generally in terms of such service measures as speed and travel time, freedom to maneuver, traffic interruptions, and comfort and convenience. It is a qualitative, not quantitative, measure of service that allows the general reader to better understand the conditions that either exist at the site, or would exist at the site due to future uses. LOS classifications range from A to F (A being the best case of traffic flow and F being

¹ Highway Capacity Manual, 2000, Transportation Research Board, National Research Council, Washington, D.C., U.S.A.

the worst). There are no numerical comparisons that go along with the classifications, but rather a long string of variables that are summed and ultimately used to make a determination.

4.0 EXISTING CONDITIONS

The existing conditions were assessed by conducting a traffic count at the split intersection of San Juan Road, Miller Road, and Live Oak Drive. The traffic counts were conducted from 7 am to 9 am and 3 pm to 5 pm on a non-holiday weekday (December 15, 2009) in order to measure the peak morning hour and peak afternoon hour traffic conditions. The peak morning hour traffic conditions occurred between 7:15 and 8:15 AM. The peak afternoon hour traffic conditions occurred between 3:00 and 4:00 PM.

The Intersection geometry is illustrated on **Plate 3**. The Traffic count data is illustrated on **Plate 4 and 5**. The intersection LOS was estimated using the Highway Capacity Software (HCS+) developed by McTrans™. The traffic count summary is presented in **Appendix B**. Printouts of the HCS+ data are included in **Appendix C**. Table 1 identifies the existing LOS. The existing LOS for the study area intersections are operating at or below a LOS of A.

Table 1: Existing Intersection LOS as Calculated by HCS+	
Intersection	Existing LOS
San Juan Road, Miller Road, and Live Oak Drive (Peak Hour 715AM-815AM)	San Juan Rd. (A), Miller Rd. & Live Oak Dr. (A)
San Juan Road, Miller Road, and Live Oak Drive (Peak Hour 300PM-400PM)	San Juan Rd. (A), Miller Rd. & Live Oak Dr. (A)

5.0 BACKGROUND (EXISTING PLUS APPROVED PROJECTS)

5.1 Cumulative Project Traffic

Cumulative project traffic includes existing conditions plus other pending or approved projects within the area and without the proposed project. The entire area surrounding the proposed project has been developed with the exception of roughly 24 acres of open undeveloped land. The 24 acres of open space is spread out across 5 separate parcels. Approximately half of the undeveloped land is within one half mile to the east of the site with the other half within one half mile to the west of the site, all of which are along San Juan Road. Conceivably, if future projects are intended for the surrounding open land they could add additional traffic load to the existing traffic system.

Primarily, these potential developments would have an effect on San Juan Road. Although, no known pending or future projects are expected at this time, our firm has provided an estimate based on commercial acreage versus added traffic load ratios. These estimated values of additional traffic are based on TIPS Trip Generation Software (TIPS)². Since the PM traffic study totals were the higher of the two traffic count times, this data will be added to using the estimated traffic value increases. Based on TIPS, an additional **404 vehicle trips** over the peak hour existing conditions could occur. This estimate was made by assuming a commercial

² TIPS Trip Generation Software, Version 1.4.0, 2009, Department of Transportation, State of Florida

retail area of roughly 24 acres in size. TIPS' compares multiple real world quantitative data for existing traffic conditions at various locations throughout the country. It is based in part on the Institute of Transportation Engineers (ITE) Trip Generation Handbook 7th Edition³. Roughly 39 similar size commercial development case studies were analyzed in order to attain the above mentioned vehicles trips.

The intersection LOS was estimated using the Highway Capacity Software (HCS+) developed by McTransTM. Our methodology for distribution of additional vehicle trips to the study intersection (for all analysis performed) was based on the traffic count data for thru and turning vehicles. A proportionate number of vehicles were added to each lane movement over the peak hour based on the percentage of observed traffic movement. As an example, if 10 percent of the peak hour traffic went thru going eastbound along San Juan Road, then an extra 10 percent of the additional 404 vehicle trips were added to the analysis for thru going eastbound traffic along San Juan Road. Table 2 identifies the existing plus approved projects LOS estimation. The predicted LOS for the study area intersection would be operating at or below a LOS of A. As indicated this methodology was used for this analysis, as well as the following three analyses below.

Table 2: Existing Intersection plus Approved Projects	
LOS as Calculated by HCS+	
Intersection	Existing plus Predicted Approved Projects LOS
San Juan Road, Miller Road, and Live Oak Drive (Peak Hour 300PM-400PM)	San Juan Rd. (A), Miller Rd. & Live Oak Dr. (A)

6.0 BUILD-OUT OF PROPOSED PROJECT

6.1 Project Traffic

TIPS software was also used to estimate the potential additional traffic load that would be generated by the sites use as a 66 multi-family residential affordable housing project. Based on TIPS an additional **55 vehicle trips** could be added to the peak hour traffic. Table 3 identifies the build-out of proposed project LOS. The predicted LOS for the study area intersection would be operating at or below a LOS of A.

Table 3: Build-out of Proposed Project	
LOS as Calculated by HCS+

San Juan Road, Miller Road, and Live Oak Drive (Peak Hour 300PM-400PM)	San Juan Rd. (A), Miller Rd. & Live Oak Dr. (A)

³ Institute of Transportation Engineers, 2003, Trip Generation, 7th Edition, Washington D.C.

7.0 BUILD-OUT OF PROSED PROJECT PLUS REMAINDER OF SITE

7.1 Build-out Plus Remainder of Site (Commercial Option)

Our study using TIPS estimated the potential additional traffic load that would be generated by the sites use as a 66 multi-family residential affordable housing project and the addition of the remaining approximate 4.0 acres of the parcel, assuming it was developed as commercial. Based on TIPS an additional **190 vehicle trips** could be added to the peak hour traffic due to further development of the remaining approximate 4 acres as commercial. Table 4 identifies the build-out of proposed project plus build-out of the remainder (approximately 4.0 acres) commercial LOS. The predicted LOS for the study area intersection would be operating at or below a LOS of A.

Table 4: Build-out plus Remainder (Commercial)	
LOS as Calculated by HCS+	
Intersection	Existing LOS
San Juan Road, Miller Road, and Live Oak Drive (Peak Hour 300PM-400PM)	San Juan Rd. (A), Miller Rd. & Live Oak Dr. (A)

7.2 Build-out Plus Remainder of Site (Mixed Use Option)

Our study using TIPS estimated the potential additional traffic load that would be generated by the sites use as a 66 multi-family residential affordable housing project and the addition of the remaining approximate 4.0 acres of the parcel, assuming it was developed as mixed use. Based on TIPS an additional **63 vehicle trips** could be added to the peak hour traffic due to further development of the remaining approximate 4 acres as mixed use. Table 5 identifies the build-out of proposed project plus build-out of the remainder (approximately 4.0 acres) mixed use LOS. The predicted LOS for the study area intersection would be operating at or below a LOS of A.

Table 5: Build-out plus Remainder (Mixed Use)	
LOS as Calculated by HCS+	
Intersection	Existing LOS
San Juan Road, Miller Road, and Live Oak Drive (Peak Hour 300PM-400PM)	San Juan Rd. (A), Miller Rd. & Live Oak Dr. (A)

8.0 CONCLUSIONS

The above stated conditions were assessed by Highway Capacity Software (HCS+) developed by McTrans™. Printouts of the HCS+ data are included in **Appendix C**. The predicted LOS for the study area intersection is operating below or at an LOS of A in all cases analyzed. As mentioned in section 3.1 Significance Standards, A project-related or cumulative traffic impact is considered to be significant if the proposed project causes the existing level of service to

degrade to worse than LOS D at any intersection. Since this did not occur our firm concludes that this project will not have a significant degradation impact to the surrounding traffic system.

9.0 MITIGATION MEASURES

The project does not appear to lower the surrounding streets or intersections to a Level of Service worse than the level of D. As illustrated in the above tables, all roads are currently running at an operational LOS of A, and all situations analyzed predicted an operational LOS of A. Based on this information, no mitigation measures are warranted.

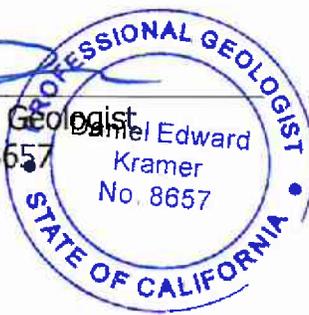

10.0 LIMITATIONS

Care should be taken to understand that our office performed this original investigation using assumptions in part made by outside resources (i.e McTran's and TIPS Software). These outside resources used in part various real world case studies to conclude site specific data such as trip generation values. Consequently, we do not take any responsibility for reporting errors that could arise from misinformation obtained from these outside sources. This is a study of existing data and traffic only. It is not a more detailed traffic analysis including general planning for traffic engineering and/or modeling. A more encompassing traffic engineering report analysis was not required nor intended.

If there is a substantial lapse of time between the submission of our report and the start of work at the site, or if conditions have changed due to natural causes or construction operations at or adjacent to the site, we urge that our report be reviewed to determine the applicability of the conclusions and recommendations considering the changed conditions and time lapse. This report is applicable only for the project and site studied. **This report should not be used after 2 years, unless our office is afforded the opportunity to update our study.**

Our professional services were performed, our findings obtained, and our recommendations proposed in accordance with generally accepted engineering principles and practices. This warranty is in lieu of all other warranties either expressed or implied. Test findings and statements of professional opinion do not constitute a guarantee or warranty, expressed or implied.

Sincerely,
NEIL O. ANDERSON & ASSOCIATES, INC.

Daniel E. Kramer, Project Geologist
Professional Geologist #8657

Sum of flow ratios for critical lane groups, $Y_c = \text{Sum (v/s)} = 0.27$
Total lost time per cycle, $L = 0.00 \text{ sec}$
Critical flow rate to capacity ratio, $X_c = (Y_c)(C)/(C-L) = 0.27$

ERROR MESSAGES

No errors to report.

APPENDIX D

LETTER DATED NOVEMBER 24, 2009

CITY OF HOLLISTER DEVELOPMENT SERVICES

City of Hollister

Development Services

Planning Division

November 24, 2009

375 Fifth Street, Hollister, CA 95023

Ph (831) 636-4360

Fax (831) 636-4364

Mr. Mike Kelley
The Pacific Companies

Dear Mr. Kelley,

Thank you for forwarding a copy of a preliminary site plan for a possible affordable housing project in the City of Hollister. This enabled the City of Hollister Development Review Committee to review a pre-application site plan for a 66 multi-family residential affordable housing project on the eastern portion of an eight acre property fronting San Juan Road (APN 052-090-043) at the meeting of November 24, 2009. Sewer, water and storm drainage facilities are located in the project area. Maps of the location and size of the facilities are attached for your information.

The Development Review Committee identified the following issues related to the site plan.

- 1) Traffic Study: A traffic engineering study will be required to evaluate the impacts of build-out of the eight acre parcel to the intersection of San Juan Road and Miller Road. The traffic engineering report must evaluate the traffic impacts at the intersection during the morning and afternoon peak hours for the following scenarios: 1) Existing conditions; 2) Background (Existing plus approved projects); 3) Build-out of the 66 units multi-family residential development; 4) Buildout of the proposed residential project plus the remainder of the eight acre site with two options – a) commercial development and b) a mixed use development. Please contact David Rubcic, City of Hollister Engineering for further information on the traffic report at (831) 636-4340.
- 2) Circulation:
 - a. Redesign vehicular access to the project.
 - i. Unsafe dead-end on Gonzales Drive: The proposed site plan would limit access to Gonzales Drive to a pedestrian connection. The Development Review Committee cannot support this concept because it impedes turnaround for emergency response vehicles, deliveries and garbage trucks. The DRC recommends that you consider an alternative design that eliminates the dead-end. Three possible options are listed below
 - Option 1: Extend a cul-de-sac at the end of Gonzales Drive constructed to City of Hollister standards.

- Option 2: Extension of Gonzales Drive to Miller Road through the project site.
 - Option 3: Loop connection of a 50 foot wide street between San Lorenzo and Gonzales Drive with a intersection approach at San Juan Road near the mid-point between the two streets. Please contact David Rubcic of the Engineering Department to review the conceptual street patterns. With option three the traffic engineering study would be required to evaluate the impacts on left turns from the project site onto San Juan Road and recommend traffic calming measures.
- 3) Policy in the City of Hollister General Plan for the West Gateway Special Planning and standards in the City of Hollister zoning ordinance require entrances to new development in this mixed use district to be oriented toward the street with parking oriented to the rear. Buildings A and B are not oriented to the street. Building B would also partially face the wall of an existing convenience store which conflicts with City standards.
 - 4) Please review the standards for mixed use developments in our zoning ordinance (attached).
 - 5) As required by Section 17.18.030 A. of the City of Hollister zoning ordinance, please include a circulation plan that factors multi-modal connections between the project site and adjoining properties and land uses and internal pedestrian connections.
 - 5) Include speed bumps on the project site as a traffic calming measure.

I expect that we will be discussing these comments within the next few days. I will be out of the office on Wednesday, November 23, 2009 but Abraham Prado in our Planning Division will be available to discuss this with you.

Sincerely,

Mary M. Paxton
Planning Manager
City of Hollister Development Services, Planning Division

17.18.030 - General Pedestrian, Bicycle and Parking Regulations

A. Circulation Plan. A circulation plan for vehicular and pedestrian access and parking facilities shall be required for new development, a building addition(s) or a change of use that the Engineering Department determines substantially increases the off-street parking requirements. The plan shall include the following:

1. Parking facilities as required in this chapter.
2. A shaded (deciduous trees are acceptable) pedestrian path with an American with Disabilities Act (ADA) accessible paving surface that contrasts with and can be clearly distinguished from paved areas for vehicles. Paint shall not be allowed to provide contrast. The pedestrian paths shall be separated from internal roads and parking aisles with landscaping, building orientation or other strategies.
3. Pedestrian paths shall be designed to provide a continuous series of connections between sidewalks, buildings and adjoining properties. The plans shall show a minimum of one pedestrian path per street frontage and one path for every three parking aisles. Crossings through internal roads shall have contrasting paving (paint shall not be used for contrast).
4. The circulation plan shall incorporate any approved Bicycle and Pedestrian Master Plan or guidelines adopted to implement the City of Hollister General Plan policies and programs for multi-modal access.
5. All paved surfaces shall provide a continuous, smooth, vibration-free surface that complies with ADA requirements and ensures safe access for bicycles.
6. On site signs shall have a minimum clearance of seven feet between the sign and the ground.
7. All on-site grates and similar storm water facilities shall be suitable for crossing on a bicycle.
8. Transit facilities based on consultation with the San Benito County Local Transportation Authority.
9. Outdoor seating shall be integrated into the plan with a variety of strategies including raised planters and/or fountains with seating and benches that are designed to deter the use of skateboards.

17.18.040 Commercial vehicle parking - Residential areas.

No commercial vehicle exceeding eight feet in height or twenty (20) feet in combined total length, or tow truck or tow equipment, shall park between the hours of 6:00 p.m. and 6:00 a.m. on private property or public rights-of-way within residential zoning

June 28, 2010

Project Number: SES090511 – Addendum #1
Transmitted via e-mail: mikek@tpchousing.com

Mr. Mike Kelley
Pacific West Communities

Subject: Traffic Engineering Study and Evaluation Addendum
Intersection of San Juan Road and Miller Road
Hollister, California

Dear Mr. Kelley:

Neil O. Anderson and Associates (NOA) have been retained by The Pacific West Communities to conduct a Traffic Impact Study (TIS) for the new Hollister Family Apartments located at the corner of San Juan Road and Miller Road, in Hollister, California. Our original report dated January 6, 2010 was performed for the site in order to conduct a full analysis on the existing and proposed traffic loads. On March 25, 2010 a public meeting was held in the City Council Chambers of the City of Hollister to address public and City staff concerns. The City of Hollister reviewed the potential impacts to the site from the subject project and felt that further analysis was needed. This report addendum addresses the concerns and additional analysis that the City requested in their most recent letter to Pacific West Communities dated May 10, 2010.

The City identified the following issues as needing further analysis:

- 1) The supplemental traffic study should focus on strategies for vehicles and pedestrians to efficiently and safely enter and exit the project site from any proposed ingress or egress. As noted in the April 7, 2010 memo from the City Engineering Department, the study needs to evaluate the interaction between the project driveway, the east driveway into the shopping center and the intersection of San Juan Road/Miller Road so the intersections function as efficiently and safely as possible. The Planning Commission comments and request summarized in the April 7, 2010 memo from the Engineering Department should be factored into the supplemental traffic report, see attached City of Hollister letter.

The purpose of a Traffic Impact Study is to provide sufficient information concerning the impacts of the project on the operational conditions of the transportation facilities in the project area. The TIS was prepared based on the California Department of Transportation "Guide for the Preparation of Traffic Impact Studies" dated December 2002. The area of study for our initial TIS included the intersections of San Juan Road, Miller Road, and Live Oak Drive. This addendum addresses the comments provided in the City's May 10, 2010 letter.

From our initial TIS, the project did not appear to lower the surrounding streets or intersections to a Level of Service worse than the level of D. As illustrated in our report, all roads were currently running at an operational LOS of A, and all situations analyzed predicted an operational LOS of A. Based on this information, no mitigation measures were warranted.

Discussion and Analysis

Two main items of concern were brought up by the planning commission in our meeting: pedestrian safety at the northeast ingress/egress at Miller Road and traffic impacts at the southwestern ingress/egress access at San Jaun Road and northeast ingress/egress at Miller Road.

Pedestrian Safety at NE Ingress/Egress

Pedestrian safety concerns were raised during the March 25, 2010 City Council meeting as well as within their letters dated April 7th and May 10th 2010. There are currently 3 crosswalks within the intersection of San Juan and Miller/Live Oak Road. Specific concerns were raised about pedestrians having to walk to the intersection to use these crosswalks. One idea was raised that could aid in more accessible pedestrian usage for those pedestrians that would wish to cross farther north along Miller Road from the intersection. The idea would be to add an additional crosswalk 200 to 300 feet north of the intersection. One question was raised in that this option could potentially cause additional queue for traffic that is heading from San Juan Road and northbound onto Miller Road.

After reviewing the effects of all of the different project components (i.e. ingress/egress, road segment and intersection LOS, and right of way safety issues) it has become clear that an additional crosswalk to be located 200 to 300 feet north of the intersection would have little to no effect on queue as it pertains to either LOS or intersection spill over. The actual vehicle counts and level of service at this time are at a Level of Service of A for Miller Road. The queue times would likely not impact the site or road segment to a great extent due to the limited number of vehicles that currently (as well as proposed additional vehicle usage) use this road. The distance from the

intersection to the proposed access point at this point is approximately 170 feet. The proposed crosswalk in this area ideally would be an additional 50 feet to the north along Miller Road from the proposed northeastern entrance. If we assume an average vehicle length plus spacing of 22 feet this would allow for a build-up of about 8 vehicles before traffic would spill into the nearest intersection of San Juan and Miller/Live Oak Road for the proposed northeastern entrance. During the peak 15 minute PM traffic period (3:30 to 3:45 PM) the total number of cars moving from the intersection north along Miller Road was 20 cars in total. Therefore, a total of 1.33 cars per minute access this area. There is significant data here that supports the limited effect of this ingress and egress point to a Level of Service A after this project is finished and site being utilized.

An alternative option to a cross walk would be to place vegetative barriers along the western border of Miller Road to help funnel pedestrians to the existing cross walk. Because the distance is roughly 170 feet from the northeastern ingress/egress point (a relatively small and walk able distance) this may be another option, however there may be additional concerns for line of site for automobiles when considering a real vegetated barrier. And from our experience a low profile vegetative barrier would be crossed. Consequently of the two options, the former would be the most effective and economical.

NE and SW Ingress/Egress

Additional analysis was requested for both the ingress and egress points that are proposed at the site. Each access point was analyzed using a Two Way Stop Control analysis (TWSC). These access points essentially become two way stopping points for the project traffic that is leaving from the site. Meanwhile these access points are considered non-stop controlled and non-stopping points for arterial traffic movement that is bypassing the site. McTrans software was used in this analysis and the peak fifteen minute period of traffic was used as a basis for background traffic. An analysis using only proposed project traffic additions was used to imply the greatest value of potential traffic movement and represent a worst case scenario for ingress/egress affects on the street Level of Service (LOS).

As stated in Section 5.1 of our initial report potential developments could have an effect on San Juan Road. Although, no known pending or future projects are expected at this time, our firm has provided an estimate based on commercial acreage versus added traffic load ratios. These estimated values of additional traffic are based on TIPS Trip Generation Software (TIPS)¹. Since the PM traffic study totals were the higher of the two traffic count times, this data will be added to using the estimated traffic value increases. Based on TIPS, an additional **404 vehicle trips** over the peak hour existing conditions could occur. This estimate was made by assuming a commercial retail area

¹ TIPS Trip Generation Software, Version 1.4.0, 2009, Department of Transportation, State of Florida

of roughly 24 acres in size. TIPS' compares multiple real world quantitative data for existing traffic conditions at various locations throughout the country. It is based in part on the Institute of Transportation Engineers (ITE) Trip Generation Handbook 7th Edition². Roughly 39 similar size commercial development case studies were analyzed in order to attain the above mentioned vehicles trips.

The ingress and egress access points affects on the main street LOS was estimated using the Highway Capacity Software (HCS+) developed by McTransTM. Our methodology for distribution of additional vehicle trips to the study intersection (for all analysis performed) was based on the traffic count data for thru traffic as well as any potential project related vehicles that were either accessing the site through entrance or exit movements. Table 1 identifies the Ingress and Egress access points LOS estimation. The predicted LOS for these points would be operating at or below a LOS of B.

Table 1: Ingress and Egress Access Points	
LOS as Calculated by HCS+	
Intersection	Predicted LOS for Future Developments
San Juan Road, Miller Road, and Live Oak Drive (Peak Hour 300PM-400PM)	San Juan Rd. (B), Miller Rd. & Live Oak Dr. (A)

Conclusions and Recommendations

The effect of the ingress and egress points from a planning standpoint exhibit Levels of Service that indicate a limited impact. However, the City of Hollister has expressed concern over the traffic turning movements and the potential queue times that could occur in an operational mode. Further, due to the intersection geometry, pedestrian safety issues raised in the March 25, 2010 meeting, and potential cross lane movement from the site while exiting (especially from the southwestern access point onto San Juan Road), the City suggested that some safety elements be further considered. After reviewing the data for pedestrian LOS and Ingress/Egress Access point LOS our firm has come up with some additional conclusions/recommendations:

Pedestrian Safety Modifications and Considerations

The potential addition of a new cross walk ideally located about 50 feet north of the northeastern proposed ingress/egress access point (along Miller Road) would help to alleviate "J" walking, while having little to no effect on the LOS or queue times for vehicles. An alternative option would be to add a vegetative barrier to

² Institute of Transportation Engineers, 2003, Trip Generation, 7th Edition, Washington D.C.

the western border of Miller Road to help funnel pedestrians to the existing crosswalks at the intersection of San Juan and Miller/Live Oak Roads.

Southwestern Ingress/Egress Access Point

The southwestern access point for the site may still be used for both ingress and egress. However, based on a vehicle delay of 0.7 seconds from our McTrans Analysis and the semi-actuated nature of the signal at the intersection of San Juan Road and Miller/Live Oak Road, a turning pocket capable of holding a minimum of three cars should be allowed for all traffic entering the site that is heading westbound along San Juan Road. The three car turning pocket plus a car at the gate would allow for 4 cars waiting to enter the site. The average time for a user opening the gate through an access code box would be approximately 4 to 5 seconds. In our professional opinion, this should be adequate space and time for cars to access the site.

In order to keep cross lane vehicle movement from occurring at the southwestern access point, a center divider may be placed at the western edge of the intersection between San Juan Road's east and west bound lanes. Based on the vehicle usage data from our traffic survey the left turning lane heading eastbound on San Juan and turning left onto Miller would need a vehicle turn pocket length of no less than 70 feet in length. This is based on a 3.0 minute light cycle with a peak 15 minute left turn usage of 27 cars. This value is three times larger than the actual current usage of 9 cars per the peak fifteen minute period. This would allow ample space and limit queue time and/or traffic buildup in the adjacent eastbound through lane along San Juan.

The effects of this turning lane and center median would have little effect on the street system in its current form because a center turning lane is already configured and has enough width to allow for this raised concrete or grass median to be placed without affecting over all movement. This will affect the ability of the traffic coming to and from the neighboring gas station/mini mart. However, the City requested this analysis and further made recommendations for such a median to alleviate safety concerns. In doing so it should be assumed that there are already safety concerns about the intersection. As such, the effect would be for a greater general safety, and although this would affect the gas station/mini mart, it would be in good practice to have this intersection altered regardless of our subject project. Based on the traffic accident reports that the City issued in its letter dated April 7, 2010, most of the incidents were due to right of way yield errors or excess speed. Although this median addition will not necessarily aid in speed reduction, it certainly will aid to make right of way and yield operations much safer coming from the gas station/mini mart onto eastbound San Juan Road.

It is our professional opinion that a better alternative for the project in-lieu of a median would be to put a sign at the ingress/egress that states no left turn into or out of the project. In addition to a sign a concrete "T" curb with optional bollards would be constructed at the ingress/egress point to prohibit this undesired traffic movement, see Sheet 2 for more detailed information. This would also allow for more future planning options for the City at the median area, these could be in the form of additional lanes along San Juan Road, etc. This alternative can also easily be installed at the neighboring gas station San Juan ingress/egress.

Northeastern Ingress/Egress Access Point

All eastbound traffic would need to access the site by way of the northeast access point along Miller Road. As stated above, the actual vehicle counts and level of service at this time are at a Level of Service of A. The queue times would likely not impact the site or road segment to a great extent due to the limited number of vehicles that currently use this road. The distance from the intersection to the proposed access point at this point is approximately 170 feet. With an average vehicle length plus spacing of 22 feet this would allow for a build-up of about 8 vehicles before traffic would spill into the nearest intersection of San Juan and Miller/Live Oak Road. During the peak 15 minute PM Traffic period (3:30 to 3:45 PM) the total number of cars moving from the intersecting north along Miller Road was 20 cars in total. Therefore a total of 1.33 cars per minute access this area. There is significant data here that supports the limited effect of this ingress and egress point to a Level of Service A after this project is finished and site being utilized.

Limitations

Care should be taken to understand that our office performed this original investigation using assumptions in part made by outside resources (i.e McTran's and TIPS Software). These outside resources used in part various real world case studies to conclude site specific data such as trip generation values. Consequently, we do not take any responsibility for reporting errors that could arise from misinformation obtained from these outside sources. This is a study of existing data and traffic only. It is not a more detailed traffic analysis including general planning for traffic engineering and/or modeling. A more encompassing traffic engineering report analysis was not required nor intended.

If there is a substantial lapse of time between the submission of our report and the start of work at the site, or if conditions have changed due to natural causes or construction operations at or adjacent to the site, we urge that our report be reviewed to determine the applicability of the conclusions and recommendations considering the changed conditions and time lapse. This report is applicable only for the project and

site studied. **This report should not be used after 2 years, unless our office is afforded the opportunity to update our study.**

Our professional services were performed, our findings obtained, and our recommendations proposed in accordance with generally accepted engineering principles and practices. This warranty is in lieu of all other warranties either expressed or implied. Test findings and statements of professional opinion do not constitute a guarantee or warranty, expressed or implied.

Sincerely,
NEIL O. ANDERSON & ASSOCIATES, INC.

April 7, 2010

Pacific West Communities
Mike Kelley
430 E.State Street, Ste. 100
Eagle, Idaho 83616

Dear Mr. Kelley:

The City of Hollister Development Services Department deemed the application for Site and Architectural Review No. 2009-11, Minor Subdivision No. 2009-2 and Conditional Use Permit No. 2010-3 complete on March 1, 2010.

A special planning commission meeting was held on March 16, 2010 for the project. Staff provided the planning commission with an oral report on the development proposal and the commission took comments from the applicant and the public. The planning commission continued the meeting to March 25, 2010 and directed staff to provide a copy of the traffic impact study prepared for the project by Neil O. Anderson & Associates, Inc.

Revised elevations for S&A 2009-11 were delivered to the Development Services Department on March 25, 2010 and were submitted to the planning commission at the meeting that evening. The planning commission discussed the traffic engineering report and reviewed the elevations. The commission requested additional modifications to the architectural design of the proposed project and also directed engineering staff to evaluate modifications to traffic improvements related to the project and changes to the traffic report.

The requested modifications to traffic improvements and to the traffic report are attached to this letter in a memo provided by the engineering department. Please note that revisions to the traffic study must clearly explain whether there are potentially significant traffic impacts and if so, determine whether any recommended improvements will reduce the impacts to an insignificant level.

In addition to the modifications of the traffic mitigations, the planning commission has requested the following changes to the elevations:

1. *Provide more window variation.* The planning commission requested that the elevation plans be revised to provide additional window variations that include

Pacific West Communities
April 7, 2010

features such as recessed windows to provide a shadow. Other window features can include trellises, and an eyebrow window architectural design, which can embellish the style of the window.

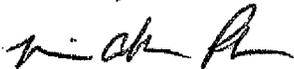

2. *Architectural features.* Include architectural features resembling the southwestern architectural style. The addition of more corbels to the building entries is indicative of a southwestern architectural style.

The revised project plans must be submitted as eight (8) individual and complete plan sets and one (1) electronic pdf set. The traffic report must be submitted as three (3) individual and complete sets and one (1) electronic pdf set. As explained in the Memo from the Engineering Department, peer review of the revised engineering report will be necessary. We will advise you of the consulting fee. You will be required to submit a deposit for the consulting fee prior to completion of the peer review.

The initial study for the project will be revised after the revised traffic engineering report is submitted, peer review is conducted and the traffic engineering report is accepted.

Please give me a call at 831-636-4360 if you have any questions or you can stop by at 420 Hill Street, Building A. Hours of operation are Monday through Thursday 8:00am to 12:00pm and 1:00pm to 5:00pm.

Sincerely,

M. Abraham Prado
Assistant Planner
Development Services Department

April 7, 2010

Memo to: Development Services Department

From: Engineering Department
David Rubcic, Associate Civil Engineer 

Subject: Hollister Family Apartments
Review of items as requested by Planning Commission on March 25, 2010

On April 1, 2010 Mary Paxton, and Abraham Prado met with this department to discuss the subject project. At the March 25, 2010 Planning Commission Meeting a discussion took place that included a request for the Engineering Department evaluate a number of items. Below you will find the issues and this department's response.

PLANNING COMMISSION COMMENTS AND REQUESTS

1. PAINTING A RED-CURB ON THE WEST SIDE OF MILLER NORTH OF SAN JUAN-HOLLISTER ROAD.

This is a possible action that will require City Council action to Modify section 10.24 of the Hollister Municipal Code prohibiting parking at this location. Doing so will provide space that will allow the creation of a left turn lane from south bound Miller to East bound San Juan-Hollister Road. The addition of this lane will provide storage for cars wanting to make a left turn and a dedicated lane for a right turn. It will require additional work on the traffic signal equipment and possibly the curb returns to allow truck and trailer combination room to make the turn. All this would have to be designed by a licensed engineer.

2. ELIMINATION OF WHEEL STOPS ON THE PROPERTY AT THE NORTHEAST CORNER OF MILLER AND SAN JUAN-HOLLISTER ROAD.

This may provide additional movement possibilities on this property. It will decrease marked parking on this site. As stated by the City Attorney our ability to require this action is prohibited as it is private property and the City has no authority with this action.

3. PLACEMENT OF "KEEP CLEAR" ZONE ON MILLER ROAD AT DRIVEWAY

"Keep Clear" zones are a traffic control strategy that can be used effectively at certain locations. This department does not recommend this location. In discussion with the Hollister Police Department they stated that enforcement would be spotty, as their staffing level will not allow an officer to be at that location. The zone will give the motoring public a false sense of hope for enforcement at that location which will increase the frequency of complaints from the public. There would be a false sense of perceived right-of-way that could lead to traffic collisions.

4. UPDATE SHEET 2 OF APPENDIX "A" TO SHOW GONZALEZ DRIVE.

This department cannot change the Traffic Impact Study. The traffic engineer should be required to make this change.

5. CONVERTING THE EMERGENCY ACCESS POINT ON SAN JUAN-HOLLISTER ROAD TO A RIGHT-TURN IN/RIGHT-TURN OUT DRIVEWAY

The City of Hollister's Engineering Department requirement for a driveway on San Juan-Hollister Road is that it must align in a location that will serve not only the project site but also the neighboring site to the west and the properties on the South side of San Juan-Hollister Road. This would not be the case for an entrance designated for emergency access only. Converting this driveway to a right-turn in/out would require that the driveway entrance be redesigned so that a minimum of a two-car queue is provided prior to the gate. This will allow for the keypad use by one car and an additional car to wait off the street. In addition, a raised landscaped center median in San Juan-Hollister Road will be required in order to prevent the left turn out of the driveway. This median will cause a secondary affect to the gas station on the south side of the roadway. This solution would result in the loss of parking and an additional condition being placed to require the property owner to cooperate with the newly created "remainder" parcel to provide a joint access to both properties.

Converting the driveway to an exit driveway only will require the same improvements as stated above with the exception of the queue. The fence would have to be a sliding electric gate with a sensing loop to open the gate to exit. Otherwise parking would be eliminated.

Regardless of the chosen solution a fire department Knox Box will be required in order to open the gate during emergency fire response to the project site.

6. PEDESTRIAN SAFETY - NOT USING THE CROSSWALKS AT THE SAN JUAN-HOLLISTER ROAD/MILLER ROAD INTERSECTION

Pedestrian safety is always an issue during development of any project site. The General Plan encourages, and the Zoning Ordinance requires the implementation of a walkable project. This project satisfies the requirement by design. However, the problem of pedestrians that are "J-walking" exists and the solution would be outside of the nexus of the project and would be an enforcement issue by the Hollister Police Department.

The signalized intersection at San Juan-Hollister Road/Miller Road includes crosswalks for both Miller Road and San Juan-Hollister Road. In order to encourage or force the pedestrians to use the crosswalks a physical barrier will have to be constructed in San Juan-Hollister Road. This could include the use of a low fence, landscaping or other barrier.

7. TRAFFIC ACCIDENTS AT SAN JUAN-HOLLISTER ROAD

The engineering department requested a listing of reported traffic accidents at the San Juan-Hollister Road for the previous three years. The report shows 9 reported accidents since 2007 that resulted in 2 injuries. When the Primary Collision Factor was reported it was either speed or failure to yield the right-of-way. These accidents were either reported at the intersection or along San Juan-Hollister Road in close proximity to the intersection.

RECOMMENDATIONS

The Planning Commission has concerns about the projects that were included in the report and asked the Engineering Department to modify the report by including certain projects in the analysis. This is not possible, as this department cannot change the Traffic Impact Study, which is an engineering study. The traffic engineer should be required to make this change.

This department also recommends that an independent third party traffic engineer be consulted to provide a peer review of the report after revisions have been completed. The third party traffic engineer shall provide their opinion on the adequacy and completeness of the revised document. Once this is completed the project's traffic engineer would be directed to address the comments. The cost of this review shall be the responsibility of the applicant for this project.

Based on the requirements of the Planning Commission and subsequent staff level meetings this department recommends the following:

- The traffic impact study shall include all background projects as listed by the Development Services Department (see the attached list).
- Provide a corrected site plan showing the revised layout of the Gonzalez drive cul-de-sac (Sheet 2 of Appendix A)
- Study the interaction between the project driveway, east driveway into the shopping center and the San Juan-Hollister Road/Miller Road Intersection and provide all potential options to make this section of Miller Road and the intersection function as efficiently and safely as possible.
- Study the optional main entrance to the project site at the San Juan-Hollister Road emergency access driveway while conforming to the constraints as identified in item 5 above.
- Utilize the current General Plan study data as a starting basis to the traffic analysis.
- Re evaluate the peak hour so that it falls in line with the general plan to be between 4-6 pm

Pacific West Communities
Mike Kelley
430 E.State Street, Ste. 100
Eagle, Idaho 83616

Dear Mr. Kelley:

The City of Hollister Development Services Department sent Pacific West Communities, Inc. a letter dated April 7, 2010 requesting changes to the traffic report, an evaluation to modifications of traffic improvements, and changes to the proposed elevations of the Hollister Family Apartments project. These requests were made by the City of Hollister Planning Commission during the March 25, 2010 Planning Commission meeting. The requested modifications to traffic improvements and to the traffic report were attached to the letter in a memo provided by the City of Hollister Engineering Department.

On Wednesday April 14, 2010 the Development Services Department received a letter from Pacific West Communities, Inc. traffic analyst Neil O. Anderson & Associates, Inc. in regards to the memo that was sent by the City. The City of Hollister reviewed the letter provided by the traffic analyst and after careful consideration the City of Hollister has determined the following:

- *Supplemental traffic counts:* The City of Hollister is no longer requesting an evaluation of background projects included in a list attached to the April 7, 2010 letter or requesting a supplemental re-evaluation of the peak hour traffic between 4 – 6 p.m.
- The supplemental traffic study should focus on strategies for vehicles and pedestrians to efficiently and safely enter and exit the project site from any proposed ingress or egress. As noted in the April 7, 2010 Memo from the Engineering Department, the study needs to evaluate the interaction between the project driveway, the east driveway into the shopping center and the intersection of San Juan Road/Miller Road so the intersections function as efficiently and safely as possible. The Planning Commission comments and request summarized in the April 7, 2010 memo from the Engineering Department should be factored into the supplemental traffic report.

Pacific West Communities, Inc.
May 10, 2010
Page 2 of 2

Please provide all other information requested on the letter and memo dated April 7, 2010. The revised project plans must be submitted as eight (8) individual and complete plan sets and one (1) electronic pdf set. The traffic report must be submitted as one (1) individual and complete set and one (1) electronic pdf set. The initial study for the project will be revised after the revised traffic engineering report is submitted and the traffic engineering report is accepted.

Please submit your revised plan sets to the Development Services, Planning Department. Please give me a call at 831-636-4360 if you have any questions or you can stop by at 420 Hill Street, Building A. Hours of operation are Monday through Thursday 8:00am to 12:00pm and 1:00pm to 5:00pm.

Sincerely,

A handwritten signature in black ink, appearing to read "M. Abraham Prado". The signature is fluid and cursive, with the first name "M." and last name "Prado" clearly visible.

M. Abraham Prado
